If you find information in this manual that is incorrect, misleading, or incomplete, we would appreciate your comments and suggestions.

FCC Warning

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the Instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

CE mark Warning

The is a class A device, In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

Trademarks

The PLANET logo is a trademark of PLANET Technology. This documentation may refer to numerous hardware and software products by their trade names. In most, if not all cases, these designations are claimed as trademarks or registered trademarks by their respective companies.

WEEE Warning

To avoid the potential effects on the environment and human health as a result of the presence of hazardous substances in electrical and electronic equipment, end users of electrical and electronic equipment should understand the meaning of the crossed-out wheeled bin symbol. Do not dispose of WEEE as unsorted municipal waste and have to collect such WEEE separately.

1. Introduction

Equipped with MPEG-4 and M-JPEG video streaming, the PLANET ICA-750 is a Dual Mode CCD Box Internet Camera which is designed for professional security and high-quality video/audio requirement. The manual Day/Night switch with ICR (IR-cut filter Removable), CS-Mount optical lens and PoE (Power over Ethernet) features provides the most flexibility of IP surveillance.

PLANET ICA-750 supports 2-Way audio that can directly make audio communication between local and remote side by using the built-in microphone and adding an external speaker. Besides web browsers, the ICA-750 also provides 3GPP capability which can let the administrators remotely view the live video via a 3G mobile phone. With DI/DO ports, users are allowed to connect external sensors or alarm devices to improve the security system with more advanced function.

1.1 Package Contents

Please inspect your package. The following items should be included in the package:

- 1 x ICA750
- 1 x Camera Stand
- 1 x Power Adapter
- 1 x Allen Wrench
- 1 x CD-ROM
- 2 x Quick Installation Guide

1.2 System Requirements

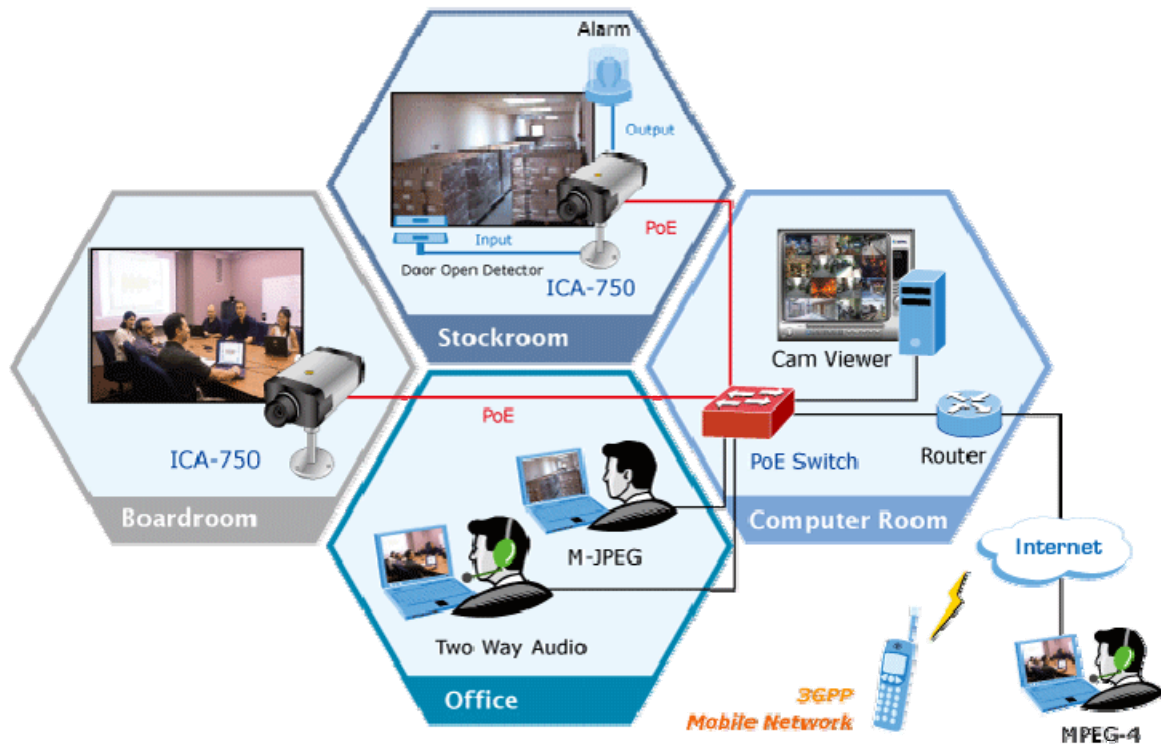

Network Interface	10/100Base-TX Ethernet
Monitoring System	Recommended for Internet Explorer 6.0 or later
System Hardware	<ul style="list-style-type: none">. CPU: Pentium 4, 1.5GHz or above. Memory Size : 512 MB or above. VGA card resolution : 1024 x 768 or above. Network bandwidth: In VGA resolution mode, minimum upload bandwidth is 1Mbps. Optional: <ul style="list-style-type: none">. Sound Card. Microphone (for PC). Speaker (for PC and ICA-750)

1.3 Features

- Day/Night Switch with ICR (IR-cut filter removable)
- MPEG-4 and M-JPEG dual codec
- 2-Way Audio supported
- 3GPP for 3G mobile remote application
- Provides 4 Motion Detection area
- E-mail Alert by motion detection and input I/O
- Up to 30 fps for all resolution
- Built-in microphone and external microphone/speaker
- PoE (IEEE802.3af) supported
- User definable HTTP and HTTPS port number
- External I/O trigger for various surveillance applications
- Central management software Cam Viewer supported

1.4 Application

Remote Monitoring applications

1.5 Outlook

1.5.1 Front Panel

The front panel of ICA-750 is shown below.

LED Definition

LED	Status	LED Description
PWR	Off	No power.
	On	Power on.
	Blinking	The Power LED will blink during start up (15 ~ 20 sec).
LAN	Off	LAN connection is not detected.
	On	LAN connection is detected.
	Blinking	Data is being transmitted or received via the LAN connection.

1.5.2 Rear Panel

The rear panel of ICA-750 is shown below.

I/O Information

Port Definition

PORT	PORT Description
Reset	Reset to manufacturer default valued and reboot. When pressed and held over 10 seconds, the settings of IP Camera will be set to the default values. Upon completion, the PWE LED will blink three times.
LAN (PoE)	Connect your Camera to a 10/100Base-TX hub or switch. It is compliant with IEEE802.3af standard PoE. Both mid-span & end-span can be used.
PWR	Connect to the supplied power adapter 12V DC, 1A. When this device is obtaining power from PoE already, you don't have to attach the power adapter to ICA-750.
DI / DO	The terminal block includes 2 input ports and 2 output ports.
AUDIO IN	An external microphone can be plugged in. That will disable the built-in microphone on the front panel.
AUDIO OUT	An external speaker can be plugged in.

1.6 Technical Specifications

Video	
Image Sensor	1/4" Sony CCD, VGA Resolution
Lens	F1.6 Fixed Focus CS Mount Type, 4 Layers Glass
Video Codec	MPEG-4 and M-JPEG Dual Stream
Resolution	640x480 320x240 160x120
Frame Rate	Up to 30 fps @ all resolution
Image Control	AWB, AEC, AGC, Contrast, Brightness auto-iris Control
3GPP	160x120 @ 15fs, MPEG-4 for mobile phone viewing
Audio	
Audio Codec	G.726 ADPCM G.711 PCM
Microphone / Speaker	Bi-directional Built-in Microphone and external Microphone / Speaker
Interface	
LAN	1 x RJ-45, 10/100Base-TX, Auto MDI/MDI-X, IEEE802.3af
AUDIO	1 x Audio In 1 x Audio Out
DI / DO	2 x Digital In 2 x Digital Out
Network	
Protocols	TCP/IP, SMTP, HTTP, DHCP, NTP, RTSP/RTP, UPnP, FTP, DDNS, HTTPS, SYSLOG, JABBER
Management	
Client	Web browser, Cam Viewer software
Security	Username and Password, HTTPS, IP Filter
Motion Detection Area	4 Area definable
E-mail Notification	Triggered by motion detection and input I/O

1.7 CS Mount Lens

The following list contains the CS Mount lenses which have been tested on the Internet Camera:

Brand	Model
TOPICA	0416-M1 0816-M1 TP-0550WOE TP-0560WOE
Computar	T2Z3514CS-2
SpaceCom	TV308DC-2 TAV2712DC
Pentax	C70220DCPS
Kowa	LMVZ38A-IR
Fujinon	YV2.8x2.8LA-SA2L
Tamron	13VG308AS 13VG2812AS 12VG412ASIR 12FM04CST 13VM308ASIR 13FM04IR

2. Installation

The followings are instructions for setting up the ICA-750. Refer to the illustration and follow the simple steps to quickly install.

2.1 Hardware Installation

1. Connect an Ethernet cable

Connect one end of an Ethernet cable to the LAN port located on the camera's rear panel and connect the other end to the network device (hub or switch).

2. Attach the external power supply

Attach the provided power adapter to the camera's connector labeled "PWR" on the rear panel.

3. Check the LEDs

- a. The Power LED will turn on briefly, and then start blinking during startup. After startup is completed, the Power LED will remain ON.
- b. The LAN LED will be ON.

2.2 Software Quick Configuration

Initial setup should be performed by using the supplied Windows-based Setup Wizard as follows:

1. Insert the bundled product CD into CD-Rom drive to launch the autorun program.
2. After the CD's menu displaying, click the "**Setup Wizard**" hyperlink on the menu to start the configuration process.

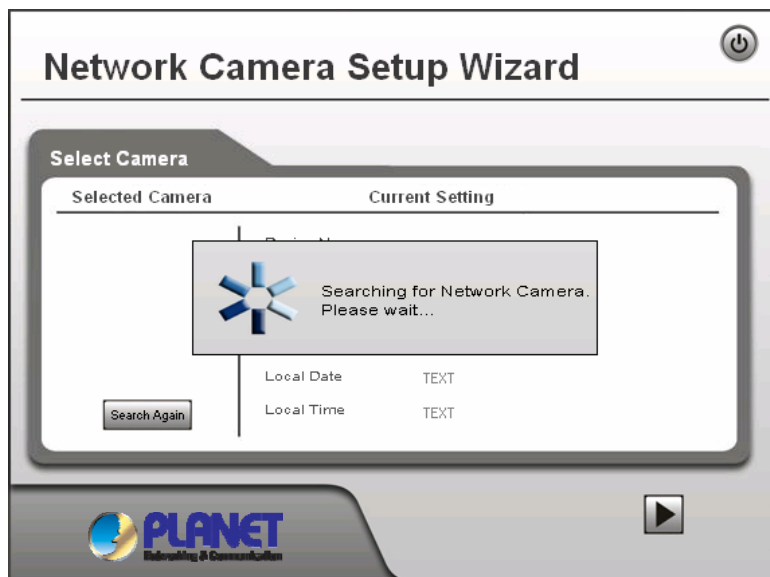

Note:

If the CD's menu does not appear, click "Start" on the task bar and select "Run" to type "**X:\Utility\SetupWizard \SetupWizard.exe**", assume X is your CD-Rom drive.

3. The welcome screen appears. Click on “**Setup Camera**” button to start the wizard.

4. After clicking the setup camera button, it will auto search for the cameras on your network. Click on  to continue.

5. The next screen below will list the camera on your network. Select it from the list on the left side, the current settings table will be displayed on the right side. Click on  to continue.

6. The administrator login window will pop up. If the Administrator Name and Administrator Password have been set, you will be prompted to enter them. If using the default values, please enter “**admin**” for both the name and the password. Click on “**OK**” to continue.

7. On the following Camera Settings screen, you can fill and configure the Device Name, Description, Time Zone, Local Date and time here. Click on  to continue.

Network Camera Setup Wizard

Camera Settings

Selected Camera	Camera Settings
PL90DF1C	Device Name: ICA-750
	Description: Office
	Time Zone: (GMT+08:00) Taipei
	Local Date: 9 / 26 / 2007
	Local Time: 3 : 42 PM

PLANET Networking & Communication

8. You can choose “**Fixed IP Address**” or “**Dynamic IP Address**” here. Click on  to continue.

Network Camera Setup Wizard

Change Settings

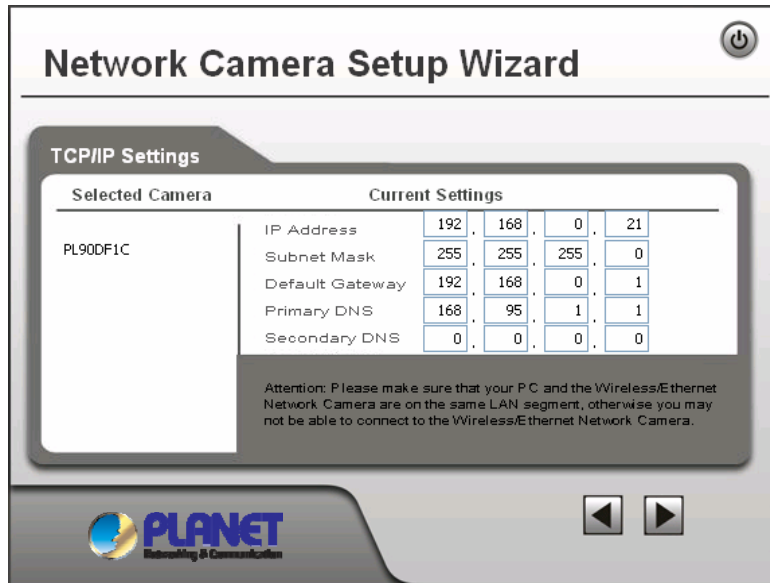

Selected Camera	IP Address Settings
PL90DF1C	<input checked="" type="radio"/> Fixed IP Address - If you wish to set a fixed IP address to this device, or there is no DHCP server on the network, please select this item.
	<input type="radio"/> Dynamic IP Address - If you wish to have this device obtains an IP address from your existing DHCP server automatically, please select this item.

PLANET Networking & Communication

Note:

1. Fixed IP Address is recommended, and can always be used.
 2. Dynamic IP Address can only be used if your LAN has a DHCP Server.
-

9. If you chose to use Fixed IP Address, the following TCP/IP Settings screen will be displayed. You can configure the IP Address, Subnet Mask, Default Gateway, Primary and secondary DNS. Click on  to continue.

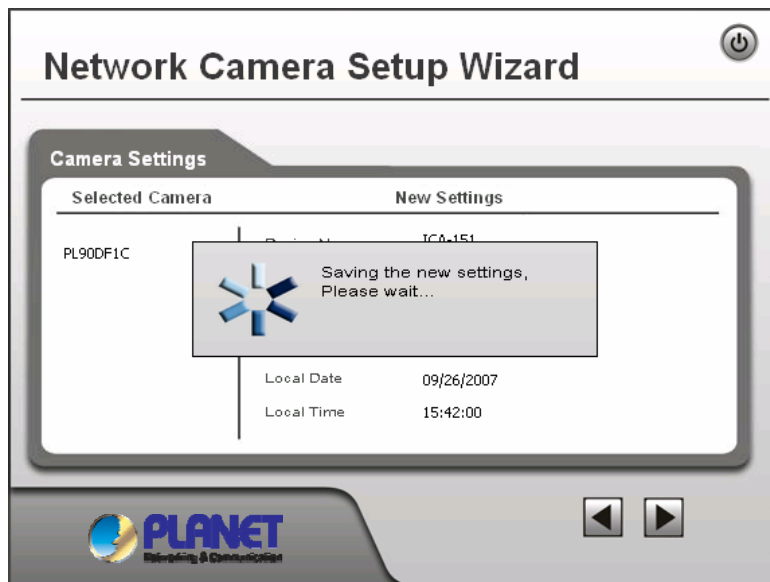

10. The next screen below will display all details of the camera. Click on  to continue if those settings are correct, or click on  back to modify any incorrect values.

11. In this confirmation window below, click on “OK” to confirm that you want to save the new settings. If you want to cancel your changes, please click on “Cancel”.

12. After confirming, the wizard will start to save the new settings as below screen.

13. When the saving process is completed, the prompt window will be displayed as below screen. Click on “**OK**” to finish.

14. The setup wizard now is completed. Click on “**Exit**” to close the setup wizard.

After modifications, you may now connect the camera with the new configuration via web browser.

3. Viewing live video

3.1 Connecting ICA-750 on your LAN

After finishing the Setup Wizard, all LAN users can view live video by using the Internet Explorer. This Chapter has details of viewing live video on your LAN.

1. Start the Web browser.
2. In the Address box, please enter "http://address". The "address" is the LAN IP address which up to your new configuration from Setup Wizard.

Note:

The LAN IP address of factory default setting is "192.168.0.20".

3. When you connect, the following home page will be displayed.

4. Click on "View Video".

Note:

If the Administrator has restricted access to known users, you will then be prompted for a username and password.

5. The first time you view the camera, you will be prompted to install an ActiveX component as below. **You must install this ActiveX component in order to view the video stream in Internet Explorer.** Click on "Install" to install.

6. After installing, you will be able to view the live video stream in its own window as below.

Note:

1. Video will start playing automatically. There may be a delay of a few seconds while the video stream is buffered.
 2. There are a number of options available on this screen, accessed by select list, button or icon. The details are described in **Chapter 3.3 – General Options**.
-

3.2 Connecting ICA-750 via Internet

To establish a connection from your PC to the camera via Internet, please obtain the following information from the Administrator of the camera you wish to connect:

- Internet IP Address or Domain Name of the camera.
- Port number for HTTP connection.
- Login (username, password) if required.

Note:

You can NOT connect to a camera via the Internet unless the camera Administrator has configured the camera and the Internet Gateway / Router used by the camera. Dial-up connections are NOT supported.

The following has details of viewing live video via Internet.

1. Start the Web browser.
2. In the Address box, please enter "http://address:port". The "address" is public IP address or public domain name, and "port" is the port number.
3. When you connect, the following home page will be displayed.

4. Click on “**View Video**”.

Note:

If the Administrator has restricted access to known users, you will then be prompted for a username and password.

5. The first time you view the camera, you will be prompted to install an ActiveX component as below. **You must install this ActiveX component in order to view the video stream in Internet Explorer.** Click on "Install" to install.

6. After installing, you will be able to view the live video stream in its own window as below.

Note:

1. Video will start playing automatically. There may be a delay of a few seconds while the video stream is buffered.
 2. There are a number of options available on this screen, accessed by select list, button or icon. The details are described in **Chapter 3.3 – General Options**.
-

3.3 General Options

These options are always available, regardless of the type of camera you are connected to.

	On Click this to set the output I/O port to ON mode.
	Off Click this to set the output I/O port to OFF mode.
	Day Click this to get better video quality during the daytime.
	Night Click this to get better video quality during the nighttime.
	Resolution Use this drop-down list to select the desired video size.
	Zoom A digital zoom feature is available. To zoom in on a section of the window, click this icon. Then use your mouse to select the section you want to magnify. Click the icon again to disable the zoom feature.
	Snapshot Click this to take a single JPEG "snapshot" image of the current video.
	Flip Click this to have the image swapped top-to-bottom.
	Mirror Click this to have the image swapped left-to-right.
	Audio On This icon is displayed if audio is On. Click on the icon to turn audio Off.
	Audio Upload This icon is displayed when the Speaker option is enabled.
	Volume If audio is enabled, use this slider to adjust the volume.
	Setup Select the desired setup format from the drop-down list.

3.4 Setting the Focus

After viewing the live video, you need to adjust focus manually by turning the front lens until the video becomes clear.

4. Web Management

This Chapter is for the Administrator only and provides setup details of the camera's Web-based Interface. The camera can be configured via your Web Browser. That must have an IP address which is compatible with your network.

Note:

The recommended method to ensure this to use the supplied Windows-based Setup Wizard is described in **Chapter 2.2 – Software Quick Configuration**.

1. After connecting to the camera, click on “**Administration**” of the home page.

2. You will then be prompted for a username and password.

Note:

1. If using the default values, enter “**admin**” for the name, and “**admin**” for the password.
 2. The Administrator's ID / Password can be set on the “**Maintenance**” of administration menu.
-

3. After login, the administration page will be displayed as below.

4. The administration menu contains following options.

Setup	System Network DDNS IP Filter I/O Port
Video & Audio	Video & Audio Video Access User Database
Event	Motion Detection E-Mail FTP Instant Messaging Event Trigger
Administration	Maintenance Status Log

4.1 Setup

4.1.1 System

This page will be displayed after clicking on “**Administration**” of the home page or “**Setup > System**” of the administration menu. It allows you to modify the system information.

System Settings	
Device ID	This displays the name for the camera.
Camera Name	This field is used for entering a name to the camera
Description	This field is used for entering a description, such as the location.
Date & Time	
Date Format	Select the desired date format, it will also be used to display the date and time as an overlay on the video image. The date formats are list as follows: 1. YYYY-MM-DD = Year-Month-Day, e.g. 2007-10-10 2. MM/DD/YYYY = Month/Day/Year, e.g. 10/10/2007 3. DD/MM/YYYY = Day/Month/Year, e.g. 10/10/2007
Current Date & Time	This displays the current date and time on the camera.
Change Button	This allows you to modify the date/time settings. This button will open a sub-page where you have 2 options: 1. Sync with PC: Set the date and time to match your PC. 2. Set New Time: Manual enter the correct date and time.

Time Zone	Choose the Time Zone for your location from the drop-down list. If your location is currently using Daylight Saving, enable the “ Adjust for daylight saving ” checkbox. You must UNCHECK this checkbox when Daylight Saving finishes.
Network Time Protocol	Enable or disable the Time Server feature as required. If Enabled, the camera will contact a Network Time Server at regular intervals and update its internal timer.
NTP Server Address	Enter the address for the desired NTP server.
Update	The Schedule determines how often the camera contacts the NTP Server. You can select the desired options.
LED Operation	Enable this if you want to use this function.

4.1.2 Network

This page will be displayed after clicking on “**Setup > Network**” of the administration menu. It allows you to set the network configuration.

IP Address: Obtain an IP address automatically (DHCP)
 Use the following IP address

DNS Server Address: Obtain DNS server address automatically
 Use the following DNS server address

Secondary Port: Enable HTTP Secondary Port (1024-65535)
 Enable HTTPS Secondary Port (1024-65535)

RTP/RTSP:
 RTSP Port: (554,1024-65535)
 RTP Data Port: (mobile phone only)
 Max RTP Data Packet: bytes (400-1400)

Multicast RTP/RTSP: Enable Multicast
 Video Address:
 Video Port: (1024-65534; Even Value)
 Audio Address:
 Audio Port: (1024-65534; Even Value)
 Time to Live: (1-255)

UPnP: Enable Discovery
 Enable Traversal (Port Mapping)

QoS: Enable QoS Mode (for Video and Audio)

IP Address	
Obtain an IP Address Automatically	If selected, the camera will obtain its IP address and related info from a DHCP Server. Only select this option if your LAN has a DHCP Server.
Use the following IP Address	If selected, you must assign the following data to the camera. IP Address: Enter an unused IP address from the range used on your LAN. Subnet Mask: Use the same value as PCs on your LAN. Default Gateway: Use the same value as PCs on your LAN.
DNS Server Address	
Obtain DNS server address automatically	If selected, the camera will use the DNS address or addresses provided by the DHCP server. This option is only available if the IP address setting is Obtain an IP address automatically.
Use the following DNS server address	Primary DNS server: Use the same value as PCs on your LAN. Secondary DNS server: This DNS will be used if the Primary DNS does not respond.

Secondary Port	
Enable HTTP Secondary Port	This sets the port number for HTTP connection to the camera, whether for administration or viewing video. If enabled, you can connect with either port 80 or the secondary port. You must enter the secondary port number (1024~65535) in the field provided.
Enable HTTPS Secondary Port	This sets the port number for HTTPS connection to the camera, whether for administration or viewing video. If enabled, you can connect with either port 443 or the secondary port. You must enter the secondary port number (1024~65535) in the field provided.
RTP / RTSP	
RTSP Port	The RTSP (Real Time Streaming Protocol) is a standard for connected clients to control streaming data (MPEG-4) over the World Wide Web. Enter the RTSP Port number (1024~65535) in the field provided. The default RTSP Port is 554.
RTP Data Port	The RTP (Real Time Transport Protocol) is an Internet protocol for transmitting real-time data such as audio and video.
Max RTP Data Port	Max RTP Data Packet field will let users limit the size of the file. Enter the desired value between 400 and 1400.
Multicast RTP / RTSP	
Video Address	Enter the address of video.
Video Port	Enter the desired value (1024~65534) in the field provided. The number you entered must be even values.
Audio Address	Enter the address of the audio.
Audio Port	Enter the desired value (1024~65534) in the field provided. The number you entered must be even values.
Time to Live	Enter the desired value (1~255), if the packets fail to be delivered to their destination within.
UPnP	
Enable Discovery	If enabled, the camera will broadcast its availability through UPnP. UPnP compatible systems such as Windows XP will then be able to detect the presence of the camera.
Enable Traversal	If enabled, the HTTP connection from your Web browser can use secondary port instead of port 80 to access the camera.
QoS	
Enable QoS Mode	If enabled, the throughput level (for Video and Audio) is guaranteed through QoS (Quality of Service).

4.1.3 DDNS

This page will be displayed after clicking on “**Setup > DDNS**” of the administration menu. It allows you to set DDNS for other Internet users to connect to your camera via domain name allocated by the DDNS service provider.

Dynamic DNS	
Enable DDNS	Enable or disable the DDNS function, as required.
Service Provider	Choose a service provider from the list.
Web Site Button	This allows you to open a new window and connect to the Web site for the selected DDNS service provider.
Domain (Host) Name	Enter the Domain Name (Host Name) allocated to you by the DDNS server provider.
Account / E-Mail	Enter the login name for the DDNS account.
Password / Key	Enter the password for the DDNS account.
Check WAN IP Address	Set the schedule for checking if the Internet IP address has changed. If the IP address has changed, the DDNS Server will be notified. NOTE: If the DDNS service provider provides some software to perform this IP address update or notification, you should NOT use this software. The update is performed by the camera.

4.1.4 IP Filter

This page will be displayed after clicking on “**Setup > IP Filter**” of the administration menu. It helps you to allow or deny the IP address by filtering.

IP Filter	
IP Filter	The IP Filter feature allows administrators to control network camera access by filtering IP address. Select the desired option from the drop-down list.
Single	Enter an IP address you would like to allow or deny.
Range	Enter a range of IP addresses you would like to allow or deny.

4.1.5 I/O Port

This page will be displayed after clicking on “**Setup > I/O Port**” of the administration menu. It allows you to set input / output port state and trigger.

The screenshot shows the PLANET administration interface for a Dual Mode CCD Box Internet Camera. The page title is "Dual Mode CCD Box Internet Camera" with navigation links for Home, View Video, and Logout. The left sidebar contains a menu with categories: Setup, System, Network, DDNS, IP Filter, I/O Port (selected), Video & Audio, Video Access, User Database, Event, Motion Detection, E-Mail, FTP, Instant Messaging, Event Trigger, Administration, Maintenance, Status, and Log.

The main content area is titled "I/O Port" and is divided into two sections:

- Input Ports:** A table with columns for #, Current State, and Triggered When... It shows two rows, both with a Current State of "Low" and a Triggered When... dropdown set to "Low".
- Output Ports:** A table with columns for #, Current State, Default State, Manual Trigger, and Action When Triggered. It shows two rows, both with a Current State of "High", a Default State dropdown set to "High", a Manual Trigger dropdown set to "ON maps to High", and an Action When Triggered dropdown set to "None".

At the bottom of the configuration area, there are four buttons: Save, Cancel, Help, and Refresh.

Input Ports	
Current State	It indicates the current state of the input port. Once the configured state is happened, it will trigger the event actions.
Triggered When...	Select the desired state (High, Low, Rising, Falling).
Output Ports	
Current State	It indicates the current state of the output port.
Default State	Select the desired option from the drop-down list.
Manual Trigger	Select the option to control the output state.
Action When Triggered	If an event is happened, it will trigger the event alerting.

4.2 Video & Audio

4.2.1 Video & Audio

This page will be displayed after clicking on “**Video & Audio > Video & Audio**” of the administration menu. It allows you to adjust the video and audio configuration.

Video Quality Control	Constant Bit Rate: Select the desired fix bit rate. Fixed Quality: Select the desired option.
Max. Frame Rate	Select the desired Maximum bandwidth for the video stream.
Access Code	Enter the code for accessing the live video from camera through mobile phone connection.
Video Adjustments	
Power Line Frequency	Select the power line frequency (50Hz or 60Hz) used in your region, to improve the picture quality under florescent lighting.
White Balance	Select the desired option to match the current environment and lighting.
Brightness	If necessary, you can adjust the brightness to obtain a better image. For example, if the camera is facing a bright light, the image may be too dark. In this case, you can increase the brightness.
Sharpness	Select the desired option for the sharpness.
Contrast	Select the desired option for the contrast.
Options	
Microphone	Enable audio by checking this checkbox. Using audio will increase the bandwidth requirements slightly.
Audio Type	Select the desired audio type.
Speaker	Enable speaker sound by checking this checkbox.
Time Stamp	If enabled, the current time will be displayed on the Video image.
Text Display	Enable this setting if you want text to be displayed on the Video image, and enter the desired text - up to 20 characters. This feature is often used to identify each camera when multiple cameras are installed.

Day/Night Switch	
Enable Night Vision Schedule	Enable Night switch schedule by checking this checkbox.
Start Time	Choose the desired start time using a 24 hr clock.
End Time	Choose the desired start time using a 24 hr clock.

4.2.2 Video Access

This page will be displayed after clicking on “**Video & Audio > Video Access**” of the administration menu. It allows you to set the rules of accessing.

User Access	
Enable Security Checking	<p>If enabled: Require login, users will be prompted for a username and password when they connect to the camera to view video. The camera administrator must use the "User Database" option to create the desired users.</p> <p>If disabled: No login required, all users do not have to provide a username and password when they connect to the camera to view video.</p>
Video Access	
Enable Scheduled Video Access	<p>If enabled: Camera is available during the scheduled periods and unavailable at other times. If this option is selected, you need to define a schedule. If no schedule is defined, this option is always disabled.</p> <p>If disabled: The option will remain disabled until you enable it.</p> <p>Note that regardless of which setting is chosen, Administrator can ALWAYS access the camera and view live video.</p>
Access Schedule	
Scheduled Periods	This displays all periods you have entered into the database. If you have not entered any periods, this list will be empty.
Delete Button	Use the Delete button to delete the selected item in the list.

Add New Schedule	
Day	Choose the desired option for the period.
Start Time	Enter the start time using a 24 hr clock.
End Time	Enter the end time using a 24 hr clock.
Add Button	Click this button to add a new period.
Clear Button	Click this button to clear the adjust values.

4.2.3 User Database

This page will be displayed after clicking on “**Video & Audio > User Database**” of the administration menu. It allows you to create the desired users.

Existing Users	
User List	This displays all users you have entered into the User database. If you have not entered any users, this list will be empty.
Edit Button	Use these buttons to manage the user database.
Delete Button	Use these buttons to manage the user database.
Delete All Button	Use these buttons to manage the user database.
User Properties	
User Name	Enter the name for the user here. Spaces, punctuation, and special characters must NOT be used in the name. The name is case insensitive (case is ignored), so you can not have 2 names which differ only by case.
User Password	Enter the password for the user.
Confirm Password	Re-enter the password for the user, to ensure it is correct.
Control Level	Select the desired control level for the user you plan to add. Note: Operator level allows user to switch day/night version and to trigger output ports manually.
Add Button	Click this button to add a new user, using the data shown on screen.
Clear Button	Click this button to clear the input fields, ready to add a new user.

4.3 Event

4.3.1 Motion Detection

This page will be displayed after clicking on “**Event > Motion Detection**” of the administration menu. It allows you to set detection areas.

The screenshot shows the PLANET Dual Mode CCD Box Internet Camera administration interface. The top header includes the PLANET logo and the title "Dual Mode CCD Box Internet Camera". The navigation menu on the left includes categories: Setup, Video & Audio, Event, and Administration. The "Event" category is expanded to show "Motion Detection". The main content area is titled "Set Detection Areas" and displays a video feed of a staircase. Four detection windows are overlaid on the video, each with an "Indicator" bar and a "Threshold" slider. An "Apply" button is located below the video feed, and a "Help" button is at the bottom right.

Set Detection Areas	
Area Screen	You can set the full screen or areas of the video image to be examined. Note that Motion detection can be triggered by rapid changes in lighting condition, as well as by moving objects. For this reason, it should only be used indoors.
Threshold	Adjust the threshold of detection for each area.

4.3.2 E-Mail

This page will be displayed after clicking on “**Event > E-Mail**” of the administration menu. It allows you to set the E-Mail alert.

Primary SMTP Server	
SMTP Server Address	Enter the address of the SMTP Server to be used to send E-Mail.
Authentication	Select the desired Authentication type for the SMTP Server.
SMTP Login name	Enter your login name for the SMTP Server.
SMTP Password	Enter your password for the SMTP Server.
POP server name	Enter the name for the POP Server.
Show "From" as	Enter the E-Mail address to be shown in the "From" field when the E-Mail is received.
Secondary SMTP Server	
Secondary SMTP	Check the box to upload to the Secondary SMTP if the camera can not connect to the primary SMTP.
SMTP Server Address	Enter the address of the SMTP Server to be used to send E-Mail.
Authentication	Select the desired Authentication type for the SMTP Server.
SMTP Login name	Enter your login name for the SMTP Server.

SMTP Password	Enter your password for the SMTP Server.
POP server name	Enter the name for the POP Server.
Show "From" as	Enter the E-Mail address to be shown in the "From" field when the E-Mail is received.
E-Mail Setup	
E-mail Address	Enter at least one E-Mail address; the 2nd and 3rd addresses are optional. The alert will be sent to the addresses specified here.
Subject	Enter the desired text to be shown as the "Subject" for the E-Mail when it is received. Subject up to 20 characters.

4.3.3 FTP

This page will be displayed after clicking on “**Event > FTP**” of the administration menu. It allows you to set FTP upload.

Primary FTP	
FTP Server	Enter the address of the FTP Server.
Port	Enter the Port of the FTP Server to be connected.
Login name	Enter your login name for the FTP Server.
Password	Enter your password for the FTP Server.
Enable Passive Mode	Check the box to enable the Passive mode feature of the FTP.
File Path Name	Enter the file path/name of the FTP.
Secondary FTP	
Secondary FTP	Check the box to upload to the Secondary FTP if the camera can not connect to the primary FTP.
FTP Server	Enter the address of the FTP Server.
Port	Enter the Port of the FTP Server to be connected.
Login name	Enter your login name for the FTP Server.
Password	Enter your password for the FTP Server.
Enable Passive Mode	Check the box to enable the Passive mode feature of the FTP.
File Path Name	Enter the file path/name of the FTP.

4.3.4 Instant Messaging

This page will be displayed after clicking on “**Event > Instant Messaging**” of the administration menu. It allows you to set Jabber and HTTP notification.

The screenshot shows the configuration page for the 'Dual Mode CCD Box Internet Camera'. The page title is 'Dual Mode CCD Box Internet Camera' with navigation links for 'Home', 'View Video', and 'Logout'. The left sidebar menu includes: Setup, System, Network, DDNS, IP Filter, I/O Port, Video & Audio, Video & Audio, Video Access, User Database, Event, Motion Detection, E-Mail, FTP, Instant Messaging (highlighted), Event Trigger, Administration, Maintenance, Status, and Log. The 'Instant Messaging' section is active and contains two sub-sections: 'Jabber' and 'HTTP Notification'. The 'Jabber' section has an 'Enable' checkbox, a 'Server Address' text box, a 'Login ID' text box, a 'Password' text box, a 'Send To' text box, and a 'Message' text area. The 'HTTP Notification' section has an 'Enable' checkbox, a 'URL' text box, a 'Proxy Server Name' text box (optional), a 'Port Number' text box (set to 80), and a 'Method' dropdown menu (set to POST). At the bottom of the page are 'Save', 'Cancel', and 'Help' buttons.

Jabber	
Enable	Enable this checkbox to use Jabber which is a free Instant Messaging.
Server Address	Enter the address of your Jabber server.
Login ID	Enter your login ID for the Jabber account.
Password	Enter your password for the Jabber account.
Send To	The log will be sent to the E-Mail address you specified here.
Message	Enter the message you wish to attach with the sending log.
HTTP Notification	
Enable	Enable this checkbox to use the HTTP Notification.
URL	Enter the URL of your HTTP notification server.
Proxy Server Name	Specify the proxy server name in the provided field if the camera needs to pass through a Proxy Server to do the HTTP notification.
Port Number	Enter the port number for the proxy server.
Method	Select the desired method of form data encoding. Get: It should be used if and only if the form processing is independent, which typically means a pure query form. Generally it is advisable to do so.

Post:

If there are problems related to long URLs and non-ASCII character repertoires, which can make it necessary to use "POST" even for independent processing.

4.3.5 Event Trigger

This page will be displayed after clicking on “**Event > Event Trigger**” of the administration menu. It allows you to set the schedule and actions of the event.

Event Schedule	
Schedule List	The Event Schedule shows all the event types currently configured in the camera
New Schedule	
Effective Time Frame	Choose the desired option for the period.
Start Time	Choose the desired start time using a 24 hr clock.
End Time	Choose the desired end time using a 24 hr clock.
Trigger Event	
Enable	Check to perform all of the events that were configured and scheduled.
Interval	Select the desired option for the events interval. (* "0" = No Delay)
Trigger by	<p>Input 1 / 2: This describes the states that the inputs must be in for an event to be triggered. Only one input can be used, also note that the states for all the inputs used must be reached before the event will be triggered.</p> <p>Motion Detection: Movement in a motion detection window can be used to trigger events.</p>

<p>Actions</p>	<p>E-Mail: If checked, an E-Mail (with "Attachment") will be delivered to the SMTP server. (SMTP Server must be configured on the E-Mail page.)</p> <p>FTP: If checked, an FTP upload will be activated to the FTP server (FTP servers must be configured on the FTP page).</p> <p>Output 1 / 2: If checked, the output ports state will be activated as configured (Output ports must be configured on the I/O Port page).</p> <p>Instant Messaging: If checked, an Instant Messaging (IM) will be delivered to the Jabber server (Jabber server must be configured on the Instant Messaging page).</p>
<p>Attachment Type</p>	<p>JPEG Image type -</p> <p>Frame Rate: Select the desired capture rate for the JPEG image here.</p> <p>Pre/Post Capture: Select the desired length. The snapshot of the JPEG image depends on this setting, and also the file size and degree of compression.</p> <p>Video type -</p> <p>Video Format: Select the desired type for the video file.</p> <p>Pre/Post Capture: Select the desired length. The size of the file depends on this setting, and also the Video size and degree of compression.</p>

4.4 Administration

4.4.1 Maintenance

This page will be displayed after clicking on “**Administration > Maintenance**” of the administration menu.

Administrator Login	
Administrator ID	Enter the name for the Administrator here.
Administrator Password	The password for the Administrator.
Verify Password	Re-enter the password to ensure it is correct.
Firmware Upgrade	
Upgrade File	Click on " Browse " button and browse to the location on your PC where you stored the firmware file. Select this file.
Start Button	Click on this button to start the firmware. When the upgrade is finished, the camera will restart, and this management connection will be unavailable during the restart.
Clear File Name Button	This does NOT stop the Upgrade process if it has started. It only clears the input for the "Upgrade File" field.
Backup & Restore	
Backup Configuration File	Click on " Backup " button to save the current configuration information to a text file.

Restore Configuration File	Click on “ Restore ” button to reinitialize the camera to load the new updated software. Do this after loading the upgrade file.
Clear File Name	This does NOT stop the Restore process if it has started. It only clears the input for the "Restore Configuration File" field.
Restore Factory Defaults	Click on “ Defaults ” button to reloads all default settings on the camera.
Restart Camera	Click on ” Restart ” button to restarts the camera.

4.4.2 Status

This page will be displayed after clicking on “**Administration > Status**” of the administration menu.

The screenshot shows the administration interface for a PLANET Dual Mode CCD Box Internet Camera. The page is titled "Dual Mode CCD Box Internet Camera" and includes navigation links for Home, View Video, and Logout. A sidebar menu on the left contains various configuration categories, with "Administration" and "Status" highlighted. The main content area displays the following information:

System	
Device Name:	ICA-750
Description:	Stockroom
FW version:	V1.0.01

Network	
MAC Address:	00:c0:02:0c:b2:32
IP Address:	192.168.0.114
Network Mask:	255.255.255.0
Gateway:	192.168.0.1

MPEG-4	
Resolution:	640*480
Video Quality:	Very High
Frame Rate:	30

MJPEG	
Resolution:	640*480
Video Quality:	Very High
Frame Rate:	30

At the bottom of the page, there are "Help" and "Refresh" buttons.

System	
Device Name	This shows the name of the camera.
Description	This shows the description of the camera, such as location.
F/W version	The version of the current firmware installed.
Network	
MAC Address	The current IP address of the camera.
IP Address	The IP Address of the camera.
Network Mask	The network mask associated with the IP address above.
Gateway	The IP Address of the remote Gateway associated with the IP Address above.
MPEG-4 / MJPEG	
Resolution	The image size of the video stream.
Video Quality	This displays the image quality of the video stream.
Frame Rate	This displays the frame rate of the video stream.

Buttons	
Help	Click on this button will call the help window.
Refresh	Update the log and any other data on screen.

4.4.3 Log

This page will be displayed after clicking on “**Administration > Log**” of the administration menu.

The screenshot shows the administration interface for a Planet Dual Mode CCD Box Internet Camera. The top navigation bar includes 'Home', 'View Video', and 'Logout'. A left sidebar contains a menu with categories: Setup, System, Network, DDNS, IP Filter, I/O Port, Video & Audio, Event, Administration, and Maintenance. The 'Log' option is selected under the Administration category.

The main content area displays a log window with the following entries:

```

10/23/2007 11:03:56 HTTP: Streaming end (HTTP: 192.168.0.106, admin).
10/23/2007 11:03:12 HTTP: Streaming start (HTTP: 192.168.0.106, admin).
10/23/2007 11:03:08 HTTP: Streaming end (HTTP: 192.168.0.106, admin).
10/23/2007 11:02:42 HTTP: Streaming start (HTTP: 192.168.0.106, admin).
10/23/2007 10:27:34 HTTP: Streaming end (HTTP: 192.168.0.106, admin).
10/23/2007 10:26:31 HTTP: Streaming start (HTTP: 192.168.0.106, admin).
10/23/2007 10:17:42 NTP: Synchronization OK.
10/23/2007 10:17:35 DHCP: Lease renewal successful.
10/23/2007 10:17:26 Network: Lan activated.
  
```

Below the log window are buttons for 'Refresh' and 'Clear Log'. There is a checkbox for 'Enable Syslog Service' which is currently unchecked, followed by a text input field for 'Syslog Server Address'. At the bottom are buttons for 'Save', 'Cancel', and 'Help'.

Log	
System Log	This is a log of system activity.
Refresh Button	Click on this to update the data shown on screen.
Clear Log	Click this button to restart the log.
Enable Syslog Service	Check the box to enable the System Log Server feature.
Syslog Server Address	Enter the address of the Syslog Server.

Appendix A --- Streaming Video / Audio Solution

Streaming video is a sequence of "moving images" that are sent in compressed form over the Internet and displayed by the viewer as they arrive. With streaming, a Web user does not have to wait to download a large file before seeing the video or hearing the sound. Instead, the media is sent in a continuous stream and is played as it arrives.

- To snapshot a JPEG image from the camera with specified resolution and quality:

`http://<ip>/img/snapshot.cgi?[size=<value>][&quality=<value>]`

Size = 1 (160*120)

2 (320*240)

3 (640*480)

Quality = 1 (Very low)

2 (Low)

3 (Normal)

4 (High)

5 (Very high)

- To stream M-JPEG video from the camera (M-JPEG mode only)

`http://<ip>/img/mjpeg.htm`

- To stream video through the RTP/RTSP protocol from camera (MPEG-4 mode only)

`rtsp://<ip>/img/media.sav`

Note:

Users need to specify the desired protocol in the players.

- To snapshot a JPEG image (160*120, very low quality) through a 3G mobile phone:

`http://<ip>/img/mobile.cgi`

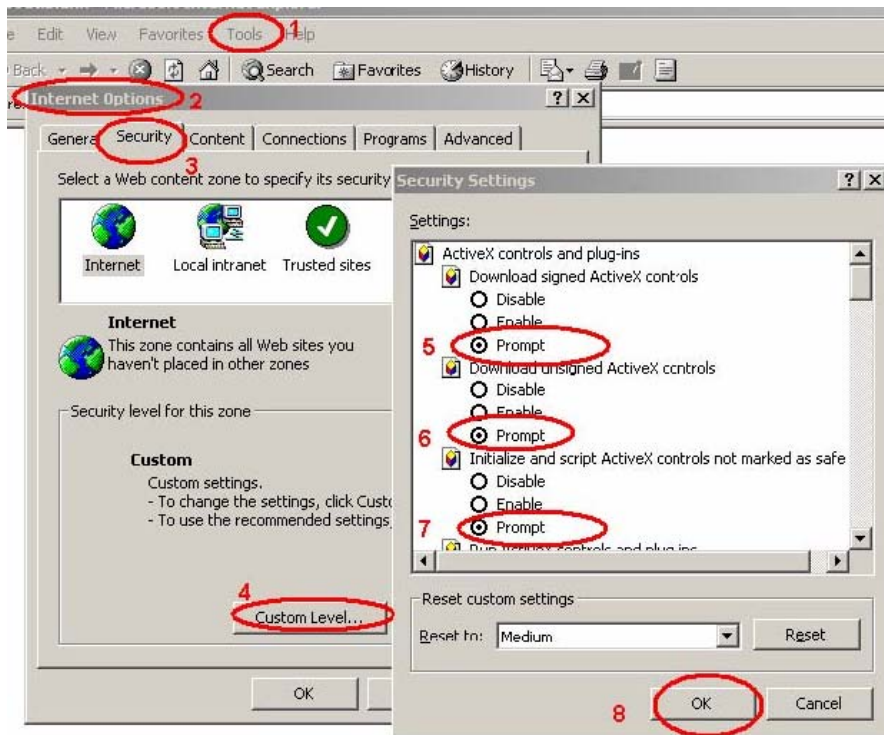

Appendix B --- Enable ActiveX options on your PC

Your Internet Explorer security settings must allow for the web page to work correctly. To use the ICA-750, user must setup his IE browser as follows:

From your IE browser → "Tools" → "Internet Options..." → "Security" → "Custom Level...", please setup your "Settings" as follow.

Enable the 3 options as below,

- Download the signed ActiveX controls
- Download the unsigned ActiveX controls
- Initialize and script the ActiveX controls not masked as safe to Prompt

By now, you have finished your entire PC configuration.

Appendix C --- Bandwidth Estimation

The frame rate of video transmitted from the ICA-750 depends on connection bandwidth between client and server, video resolution, codec type, and quality setting of server. Here is a guideline to help you roughly estimate the bandwidth requirements for your ICA-750.

The required bandwidth depends on content of video source. The slow motion video will produce smaller bit rate generally and fast motion will produce higher bit rate vice versa. Actual results generated by the ICA-750 may be varying.

Quality	640 x 480 (VGA)	320 x 240 (QVGA)	160 x 120 (QQVGA)
Very Good	4000 Kbps @ 30fps	1000 Kbps @ 30fps	800 Kbps @ 30fps
Good	3200 Kbps @ 30fps	800 Kbps @ 30fps	400 Kbps @ 30fps
Normal	1200 Kbps @ 30fps	300 Kbps @ 30fps	200 Kbps @ 30fps
Low	480 Kbps @ 30fps	120 Kbps @ 30fps	100 Kbps @ 30fps
Very Low	160 Kbps @ 30fps	40 Kbps @ 30fps	40 Kbps @ 30fps

Note:

Audio streaming also takes bandwidth around 5 kbps to 64kbps. Most xDSL/Cable modem upload speeds may not even reach up to 128 kbps. Thus, you may not be able to receive any video while streaming audio on a 128 kbps or lower connection. Even though the upload speed is more than 128kbps, for optimal video performance, disabling audio streaming will get better video performance.
