Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Plug the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or an experienced radio technician for help.

FCC Caution:

To assure continued compliance, (example-use only shielded interface cables when connecting to computer or peripheral devices) any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the Following two conditions:

- (1) This device may not cause harmful interference
- (2) This Device must accept any interference received, including interference that may cause undesired operation.

Federal Communication Commission (FCC) Radiation Exposure Statement

This equipment complies with FCC radiation exposure set forth for an uncontrolled environment. In order to avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna shall not be less than 20 cm (8 inches) during normal operation.

R&TTE Compliance Statement

This equipment complies with all the requirements of DIRECTIVE 1999/5/CE OF THE EUROPEAN PARLIAMENT AND THE COUNCIL OF 9 March 1999 on radio equipment and telecommunication terminal Equipment and the mutual recognition of their conformity (R&TTE).

The R&TTE Directive repeals and replaces in the directive 98/13/EEC (Telecommunications Terminal Equipment and Satellite Earth Station Equipment) As of April 8, 2000.

Safety

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines of this and of the computer manufacture must therefore be allowed at all times to ensure the safe use of the equipment.

National Restrictions

This device is intended for home and office use in all EU countries (and other countries following the EU directive 1999/5/EC) without any limitation except for the countries mentioned below:

| Country | Restriction | Reason/remark |
|--------------------|---|--|
| Bulgaria | None | General authorization required for outdoor use and public service |
| France | Outdoor use limited to 10 mW e.i.r.p. within the band 2454-2483.5 MHz | Military Radiolocation use. Refarming of the 2.4 GHz band has been ongoing in recent years to allow current relaxed regulation. Full implementation planned 2012 |
| Italy | None | If used outside of own premises, general authorization is required |
| Luxembourg | None | General authorization required for network and service supply(not for spectrum) |
| Norway | Implemented | This subsection does not apply for the geographical area within a radius of 20 km from the centre of Ny-Ålesund |
| Russian Federation | None | Only for indoor applications |

WEEE regulation

To avoid the potential effects on the environment and human health as a result of the presence of hazardous substances in electrical and electronic equipment, end users of electrical and electronic equipment should understand the meaning of the crossed-out wheeled bin symbol. Do not dispose of WEEE as unsorted municipal waste; WEEE should be collected separately.

Revision

User's Manual for Wired / Wireless VDSL 2 Router

Model: VC-230 / VC-230N

Rev: 2.0 (August, 2013)

Part No. EM-VC230_230N_v2.0 (**2080-AC0190-002**)

Chapter 1. Product Introduction

1.1 Package Contents

Thank you for choosing PLANET VC-230 series. Before installing the router, please verify the contents inside the package box.

VC-230 / VC-230N Unit

Quick Installation Guide

CD-ROM

(User Manual included)

Power Adapter

12V/1A DC output
100~240V AC input

Ethernet Cable

RJ-45 / CAT5E 1 meter UTP

Phone Cable

5dBi Antenna x 2

(VC-230N only)

If there is any item missing or damaged, please contact the seller immediately.

1.2 Product Description

High Performance Ethernet over VDSL

PLANET 802.11n Wireless VDSL2 Router, VC-230N, applies 2T2R MIMO antenna technology and provides office and residential users with the ideal solution for sharing a high-speed VDSL2 broadband connection and four-10/100Mbps Fast Ethernet backbone. The VC-230N is developed with three core networking technologies: IEEE 802.11b/g/n, Ethernet and VDSL2 (Very High Speed Digital Subscriber Line 2). Via VDSL 2 technology, the VC-230N offers very high performance access to Internet, up to **100Mbps** for both downstream and upstream data transmission. VDSL2 absolutely offers the fastest data transmission speed over existing copper telephone lines without the need for rewiring.

Delivering High-Demand Service Connectivity for ISP / Triple Play Devices

The VC-230N provides excellent bandwidth to satisfy the triple play devices for home entertainment and communication. With the capability of 100/100Mbps symmetric data transmission, the VC-230N enables many multi-media services to work on local Internet, such as **VOD (Video on Demand)**, Voice over IP, **Video phone**, **IPTV**, Internet caching server, **distance education**, and so on.

High-Speed 802.11n Wireless

The VC-230N complies with ITU-T G993.2 standard and provides two modes for network applications -- **Bridge** and **Router**. With built-in IEEE 802.11b/g and 802.11n wireless network capability, the VC-230N allows any computer and wireless-enabled network device to connect to it without additional cabling. 802.11n wireless capability brings users the highest speed of wireless experience ever; the data transmission rate can be as high as **300Mbps**. The radio coverage is also doubled to offer high speed wireless connection even in widely spacious offices or houses.

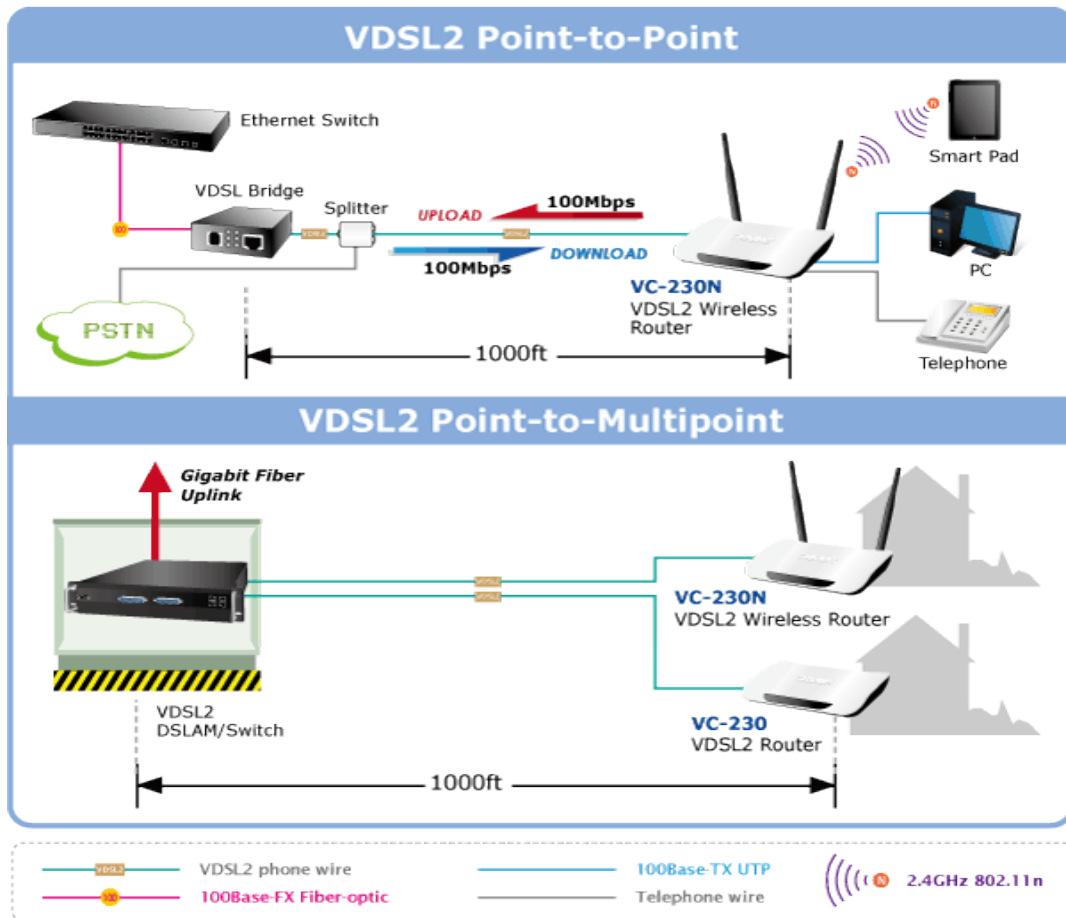

Secure Wireless Access Control

To secure wireless communication, the VC-230N supports most up-to-date encryptions including WEP, WPA-PSK and WPA2-PSK. Moreover, the VC-230N supports WPS configuration with PBC/PIN type for users to easily connect to a secured wireless network.

Multiple Functions for Broadband Communication

There are two selectable VDSL2 operating modes of VC-230N: **CO** and **CPE**, which can be adjusted by Web UI. Users can set up **Point-to-Point** application by connecting two VC-230Ns, in which one in CO mode and

the other in CPE mode, to transmit data in high speed between two networks over existing copper telephone lines.

Providing Superior Function

The VC-230N provides user-friendly management interface to be managed easily through standard web browsers. For networking management features, the VC-230N not only provides basic router functions such as DHCP server, virtual server, DMZ, QoS, and UPnP, but also provides full firewall functions including Network Address Translation (NAT), IP/Port/MAC Filtering and Content Filtering. Furthermore, the VC-230N serves as an Internet firewall to protect your network from being accessed by unauthorized users.

1.3 Product Features

> Internet Access Features

- **Shared Internet Access:** All users on the LAN can access the Internet through the VC-230N using only one single external IP address. The local (invalid) IP addresses are hidden from external sources. This process is called NAT (Network Address Translation).
- **Built-in VDSL2 Modem:** The VC-230N provides VDSL2 modem and supports all common VDSL2 connections.
- **Multiple WAN Connection:** Upon the Internet (WAN port) connection, the VC-230N supports Dynamic IP address (IP address is allocated upon connection), fixed IP address, PPPoE, PPTP and L2TP.
- **CO and CPE Support:** The VC-230N provides the Peer-to-Peer connection. Users can select the CO and CPE mode manually.
- **Bridge and Router Application:** The VC-230N supports two application modes: bridging and routing modes. Currently, the default mode is routing mode. Note: routing mode and bridging mode cannot be used simultaneously.

> Advanced Internet Functions

- **Virtual Servers:** This feature allows Internet users to access Internet servers on your LAN. The setup is quick and easy.
- **Firewall:** The VC-230N supports simple firewall with NAT technology.
- **Universal Plug and Play (UPnP):** UPnP allows automatic discovery and configuration of the Broadband Router. UPnP is supported by Windows ME, XP, or later.
- **Selectable VDSL2 Profiles:** The VC-230N supports common VDSL2 profiles (30a, 17a, 12a, 12b, 8a, 8b, 8c, 8d) for users choice. Users can select different VDSL2 profiles based on their needs.
- **User Friendly Interface:** The VC-230N can be managed and controlled through Web UI.
- **DMZ Support:** The VC-230N can translate public IP addresses into private IP address to allow unlimited 2-way communication with the servers or individual users on the Internet. It provides the most flexibility to run programs smoothly for programs that might be restricted in NAT environment.
- **RIP1/2 Routing:** It supports RIPv1/2 routing protocol for routing capability.
- **VPN Pass-through Support:** PCs with VPN (Virtual Private Networking) software are transparently supported - no configuration is required.

> LAN Features

- **4-Port Switch:** The VC-230N incorporates a 4-Port 10/100Base-TX switching hub, making it easy to create or extend your LAN.
- **DHCP Server Support:** Dynamic Host Configuration Protocol provides a dynamic IP address to PCs and other devices upon request. The VC-230N can act as a DHCP Server for devices on your local LAN.

> Wireless Features

- **Supports IEEE 802.11b, g and 802.11n Wireless Stations:** The 802.11n standard provides backward compatibility with the 802.11b and 802.11g standard, so 802.11b,

802.11g, and 802.11n can be used simultaneously. IEEE 802.11n wireless technology is capable of up to 300Mbps data rate.

- **Two External Antennas with MIMO Technology:** The VC-230N provides farther coverage, less dead spaces and higher throughput with 2T2R MIMO technology.
- **WPS Push Button Control:** The VC-230N supports WPS (Wi-Fi Protected Setup) for users to easily connect to wireless network without configuring the security.
- **WEP Support:** WEP (Wired Equivalent Privacy) is included. Key sizes of 64 bit and 128 bit are supported.
- **WPA-PSK Support:** WPA-PSK_TKIP and WAP-PSK_AES encryption are supported.
- **Wireless MAC Access Control:** The Wireless Access Control feature can check the MAC address (hardware address) of wireless stations to ensure that only trusted wireless stations can access your LAN.

1.4 Product Specifications

| Model | | VC-230 | VC-230N |
|---------------------------------|---|---|---------------------------------------|
| Product Description | | 4-Port Ethernet over VDSL2 Router | 300Mbps 802.11n wireless VDSL2 Router |
| Hardware Specifications | | | |
| Interface | LAN | 4 x 10/100Base-TX, Auto-Negotiation, Auto MDI/MDI-X RJ45 port | |
| | VDSL2 WAN | 1 x RJ-11 | |
| | PHONE | 1 x RJ-11, and built-in splitter for POTS connection | |
| | Wireless | -- | 2x 5dBi detachable antenna |

| | | 802.11b: 11/5.5/2/1Mbps (Dynamic) |
| Channel | -- | Maximum 14 Channels, depending on regulatory authorities |
| Antenna Connector | -- | 2 x 5dBi detachable Antenna |
| Wireless Data Encryption | -- | 64/128-bit WEP, WPA-PSK, WPA2-PSK, 802.1x encryption, and WPS PBC |
| Standards Conformance | | |
| Standard | VDSL2-DMT Compliant with VDSL2 ITU-T G.993.2 (8a, 8b, 8c, 8d, 12a, 12b, 17a, 30a) G.997 / G.998 Band Plan support Supports up to 100Mbps / 100Mbps for Upstream / Downstream Complaint with IEEE802.3 / 802.3u U0 Band Support (25KHz to 276KHz) Packet Transfer Mode Ethernet in the First Mile(PTM-EFM) | |
| Environment Specifications | | |
| Temperature / Humidity | Operating: 0~50 degrees C, 5%~ 90% (non-condensing), Storage: -20~70 degrees C, 0~95% (non-condensing) | |
| Certification | FCC, CE | |

Chapter 2. Hardware Installation

This chapter offers information about installing your router. If you are not familiar with the hardware or software parameters presented here, please consult your service provider for the values needed.

2.1 Hardware Description

2.1.1 Front Panel of VC-230

The front panel provides a simple interface monitoring of the router. [Figure 2-1](#) shows the front panel of VC-230.

Figure 2-1 VC-230 Front Panel

2.1.2 LED Indications of VC-230

The LEDs on the top panel indicate the instant status of system power, WAN data activity and port links, and help monitor and troubleshoot when needed. [Figure 2-1](#) and [Table 2-1](#) show the LED indications of the VC-230.

Front Panel LED Definition

| LED | State | Description |
|--|----------|--|
|  PWR | ON | When the router is powered on, and in ready state. |
| | OFF | When the router is powered off. |
|  DSL | Flashing | Router is trying to establish a VDSL2 connection to VDSL2 device or telecom's network. |
| | ON | The VDSL2 is connected successfully. |
|  LAN1-4 | Flashing | Data is being transmitted or received via the corresponding LAN port. |
| | ON | The port is up. |

Table 2-1 The LED indication of VC-230

2.1.3 Rear Panel of VC-230

The rear panel provides the physical connectors connected to the power adapter and any other network device.

Figure 2-2 shows the rear panel of the VC-230.

Figure 2-2 VC-230 Rear Panel

Rear Panel Port and Button Definition

| Connector | Description |
|------------------|--|
| POWER | Power connector with 12V DC 1 A |
| RESET | Press more than 3 seconds for reset to factory default setting. |
| LAN (1-4) | Router is successfully connected to a device through the corresponding port (1, 2, 3, or 4). If the LED light of LNK/ACT is flashing, the Router is actively sending or receiving data over that port. |
| PHONE | Built-in splitter for POTS connection. |
| VDSL2 | The RJ-11 connector allows data communication between the router and the VDSL2 network through a twisted-pair phone wire |

2.1.4 Front Panel of VC-230N

The front panel provides a simple interface monitoring of the router. [Figure 2-3](#) shows the front panel of the VC-230N.

Figure 2-3 VC-230N Front Panel

2.1.5 LED Indications of VC-230N

The LEDs on the top panel indicate the instant status of system power, wireless data activity, WPS, and port links, and help monitor and troubleshoot when needed. [Figure 2-3](#) and [Table 2-2](#) show the LED indications of the VC-230N.

| LED | State | Description |
|--|----------|--|
|  PWR | ON | When the router is powered on, and in ready state. |
| | OFF | When the router is powered off. |
|  WPS | ON | WPS client registration is successful. |
| | Flashing | WPS client registration window is currently open. |
| | OFF | WPS is not available, or WPS is not enabled or initialized. |
|  WLAN | ON | WLAN radio is on. |
| | Flashing | Data is being transmitted through WLAN. |
| | OFF | WLAN radio is off. |
|  Security | ON | Enable WLAN encryption |
| | OFF | Disable WLAN encryption |
|  DSL | Flashing | Router is trying to establish a VDSL2 connection to VDSL2 device or telecom's network. |
| | ON | The VDSL2 is connected successfully. |
|  LAN1-4 | Flashing | Data is being transmitted or received via the corresponding LAN port. |
| | ON | The port is up. |

Table 2-2 The LED indication of VC-230N

2.1.6 Rear Panel of VC-230N

The rear panel provides the physical connectors connected to the power adapter and any other network device. Figure 2-4 shows the rear panel of the VC-230N.

Figure 2-4 VC-230N Rear Panel

Rear Panel Port and Button Definition

| Connector | Description |
|------------------|--|
| POWER | Power connector with 12V DC 1 A |
| RESET | Press more than 3 seconds for reset to factory default setting. |
| LAN (1-4) | Router is successfully connected to a device through the corresponding port (1, 2, 3, or 4). If the LED light of LNK/ACT is flashing, the Router is actively sending or receiving data over that port. |
| WPS | WPS on or off switch. |
| PHONE | Built-in splitter for POTS connection. |
| VDSL2 | The RJ-11 connector allows data communication between the router and the VDSL2 network through a twisted-pair phone wire |

Chapter 3. Connecting to the Router

3.1 System Requirements

- Broadband Internet Access Service (Cable/xDSL/Ethernet connection)
- One Cable/xDSL Modem that has an RJ-45 connector (not necessary if the Router is connected directly to the Ethernet.)
- PCs with a working Ethernet Adapter and an Ethernet cable with RJ-45 connectors
- PC of subscribers running Windows 98/ME, NT4.0, 2000/XP, Windows Vista / Win 7, MAC OS 9 or later, Linux, UNIX or other platform compatible with **TCP/IP** protocols
- The above PC is installed with Web browser

1. The Router in the following instructions is named as PLANET VC-230 / VC-230N
2. It is recommended to use Internet Explorer 7.0 or above to access the Router.

3.2 Installing the Router

Please connect the device to you computer as follow:

- Connect your telephone to the “Phone” Port via RJ-11 telephone line.
- Use another telephone cable to connect “VDSL” port of the router. And connect the other side to your CO side devices, such as VDSL 2 DSLAM, VDSL 2 Switch, or another VDSL2 ROUTER with CO mode.
- Use Ethernet cable to connect “LAN” port of the modem and “LAN” port of your computer.
- Connect Power Adapter to VC-230/VC-230N. [Figure3-1](#), [Figure3-2](#) show the power adapter connection diagram.

Figure 3-1: VC-230 Power Adapter Connection Diagram

Figure 3-2: VC-230N Power Adapter Connection Diagram

- Locate the VC-230N in an optimum place and adjust the antenna for the best coverage. [Figure 3-3](#) shows the antenna connection diagram. (VC-230N only)

Figure 3-3: VC-230N Antenna Adjustment Diagram

- Follow [Figure 3-4](#), [Figure 3-5](#) to connect the network devices.

Figure 3-4: VC-230 Connection Diagram

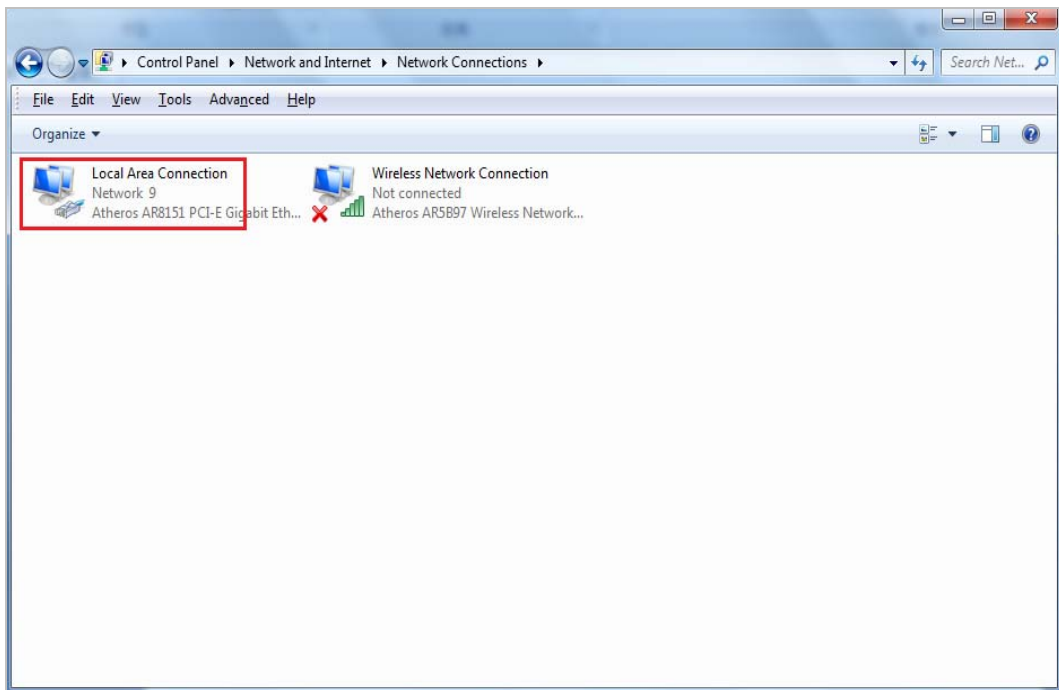

Figure 3-5: VC-230N Connection Diagram

Chapter 4. Installation Guide

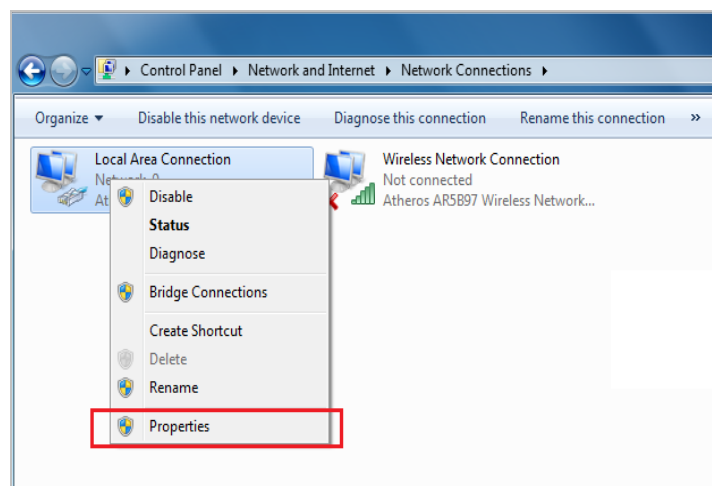

4.1 Configuring the Network Properties

Configuring PC in Windows 7

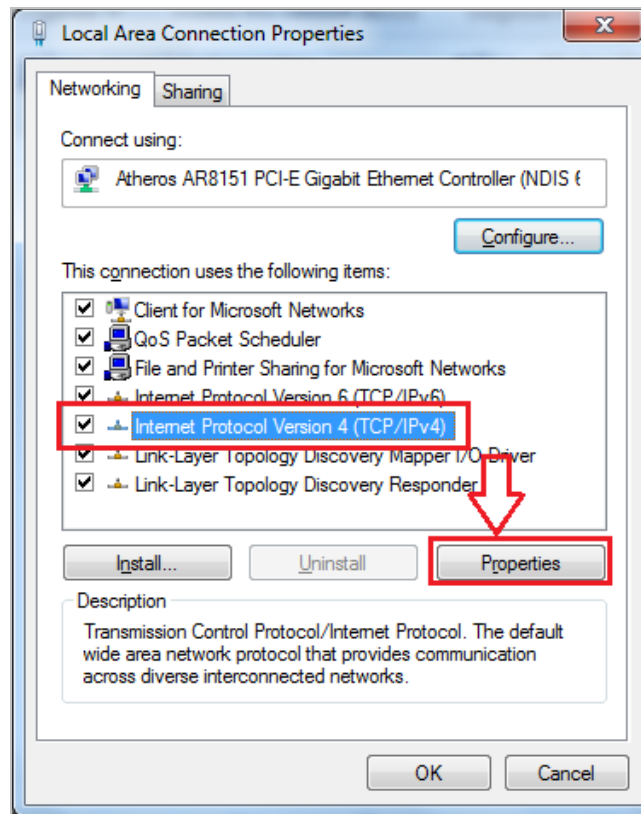

1. Go to **Start / Control Panel / Network and Internet / Network and Sharing Center**. Click **Change adapter settings** on the left banner.
2. Double-click **Local Area Connection**.

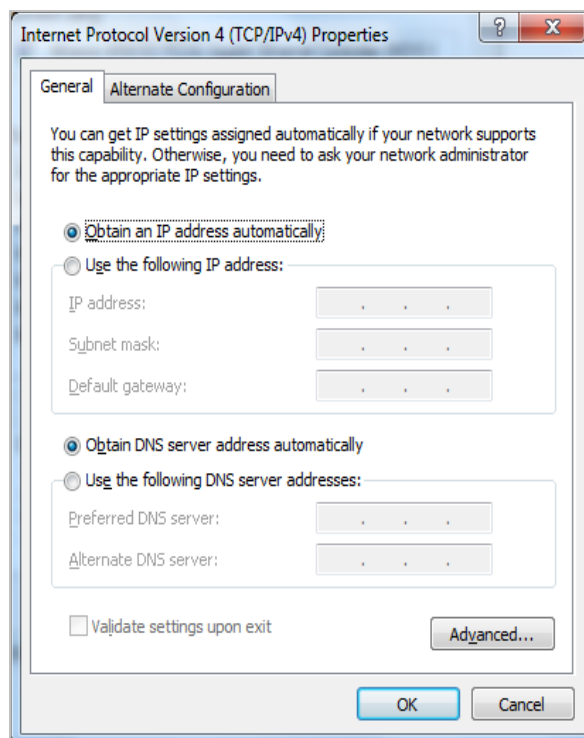

3. In the **Local Area Connection Status** window, click **Properties**.

4. Select **Internet Protocol Version 4 (TCP/IPv4)** and click **Properties**.

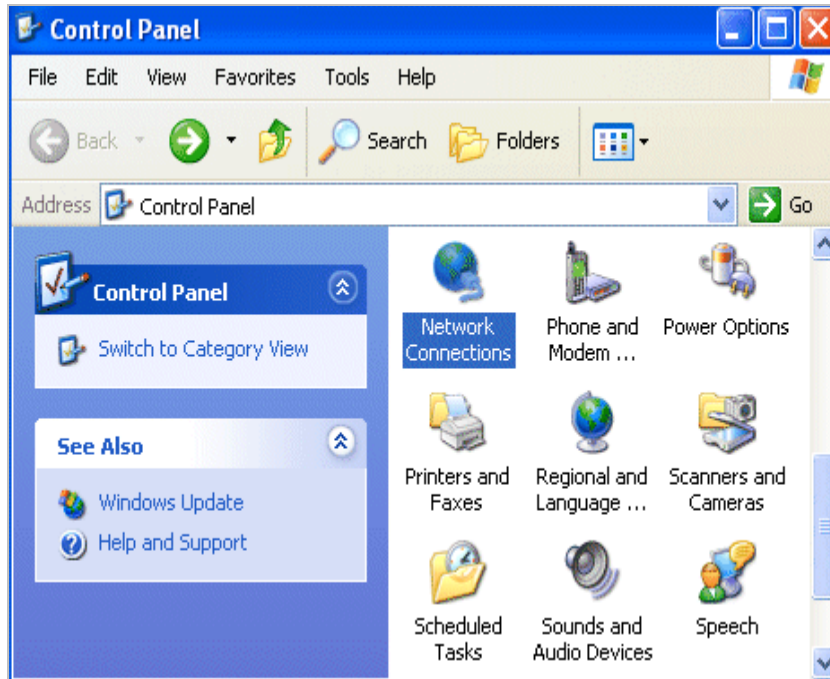

5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** button.
6. Click **OK** to finish the configuration.

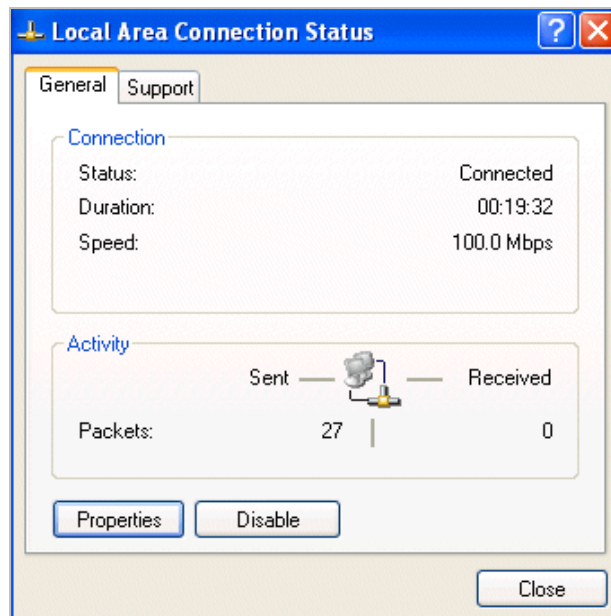

Configuring PC in Windows XP

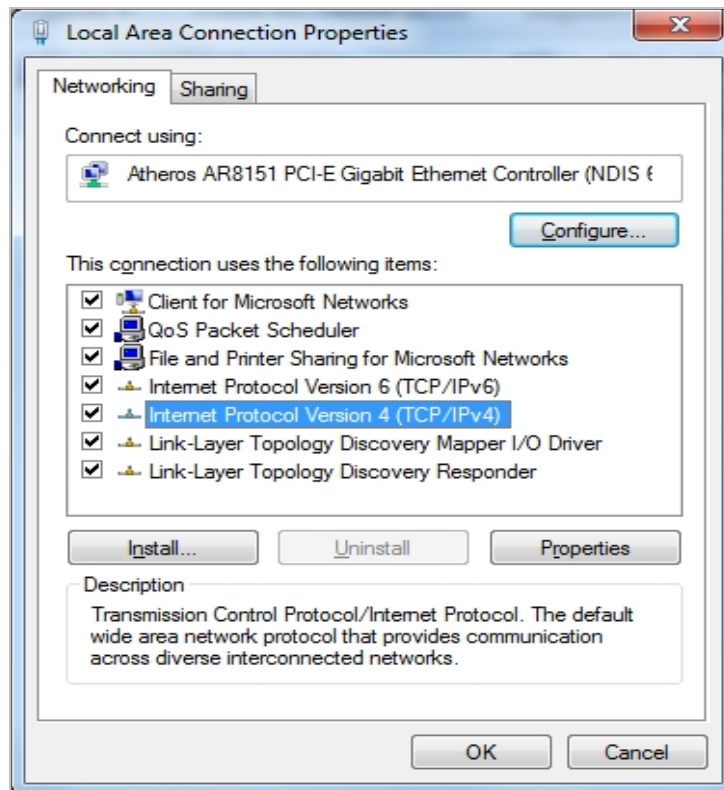

1. Go to **Start / Control Panel (in Classic View)**. In the Control Panel, double-click on **Network Connections**
2. Double-click **Local Area Connection**.

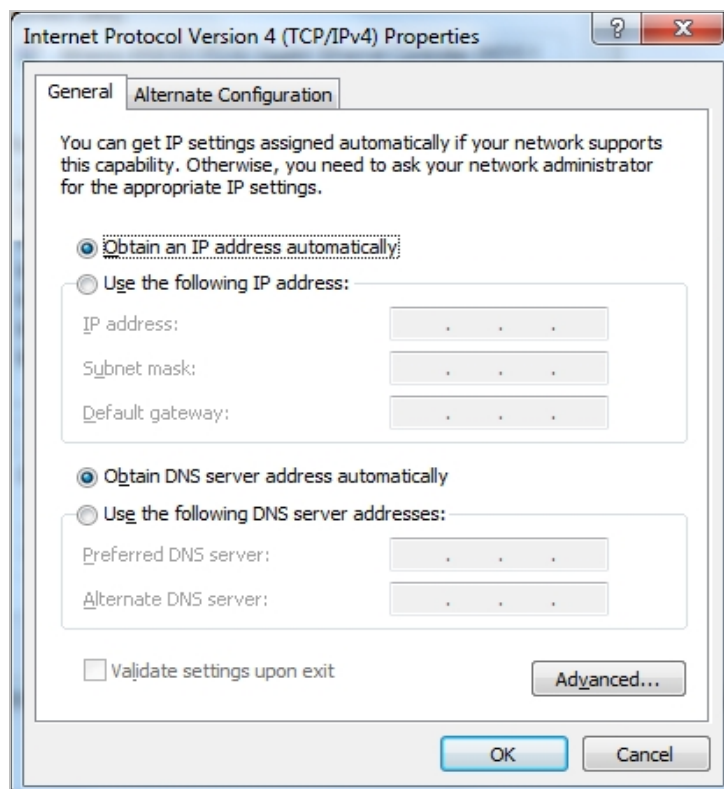

3. In the **Local Area Connection Status** window, click **Properties**.

4. Select **Internet Protocol (TCP/IP)** and click **Properties**.

5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** button.
6. Click **OK** to finish the configuration.

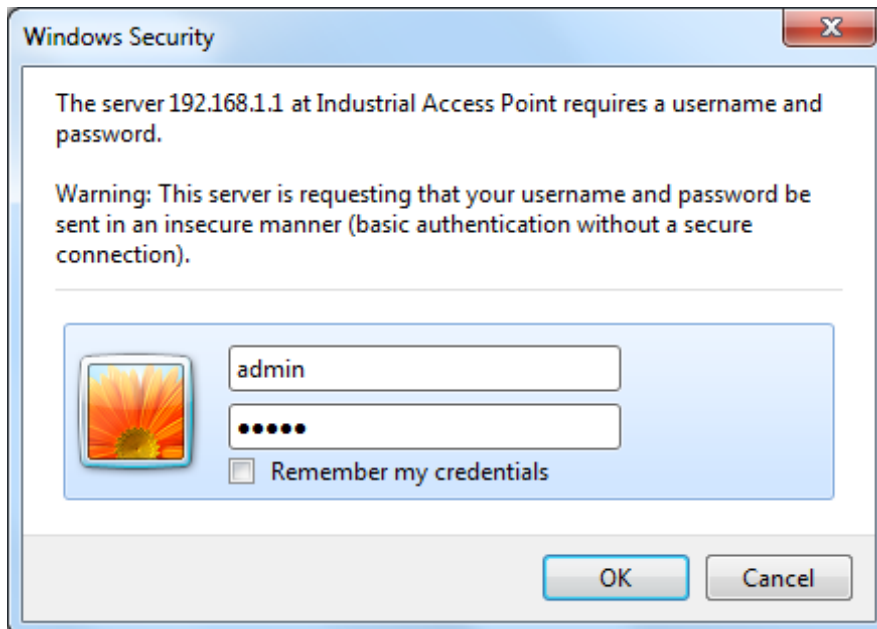

4.2 Configuring with Web Browser

It would be better to change the administrator password to safeguard the security of your network. To configure the router, open your browser, type “**http://192.168.1.1**” into the address bar and click “**Go**” to get to the login page.

Save this address in your Favorites for future reference.

At the User Name and Password prompt, type your proper user name and password to login. The default user name / password are “**admin / admin**”. You can change these later if you wish. Click “**OK**”.

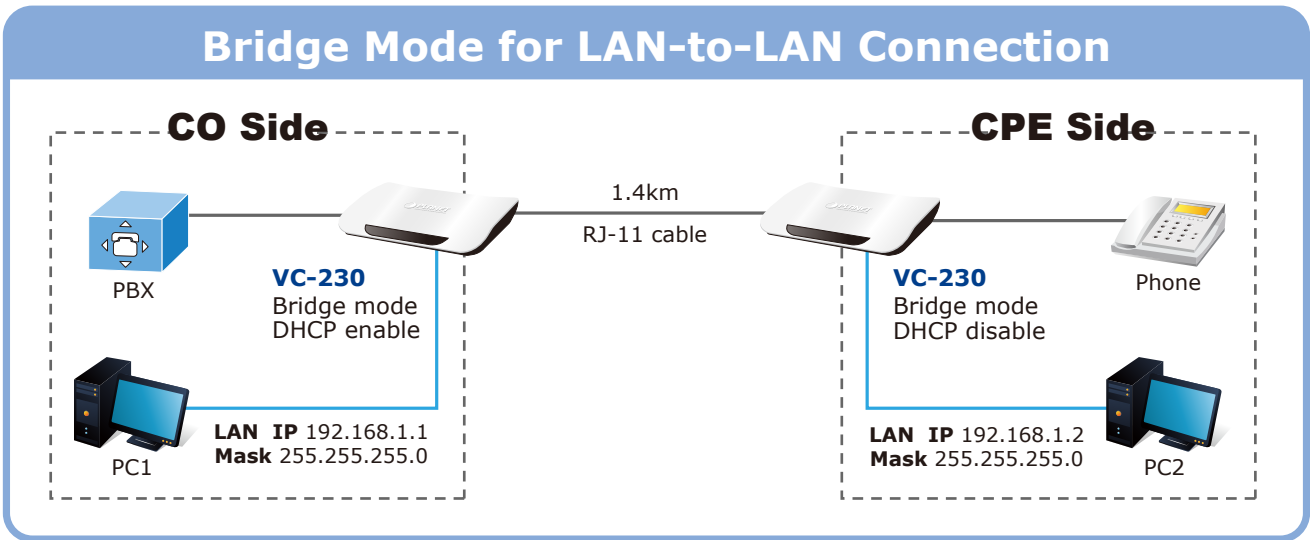

If the user name and password are correct, you will login VDSL2 ROUTER successfully and see the status page. Now you can configure the VDSL2 ROUTER for your needs.

| System Info | |
|------------------|------------------------------|
| Firmware Version | v1.1b130807 |
| System Up Time | 0 day, 0 hour, 2 min, 58 sec |
| Operation Mode | Bridge Mode |
| Local Network | |
| Local IP Address | 192.168.1.1 |
| Local Netmask | 255.255.255.0 |
| MAC Address | 00:30:4F:12:34:06 |

4.3 Applications

The VDSL2 ROUTER supports two modes; users can select Router or Bridge mode for your applications. Please check below examples for more details.

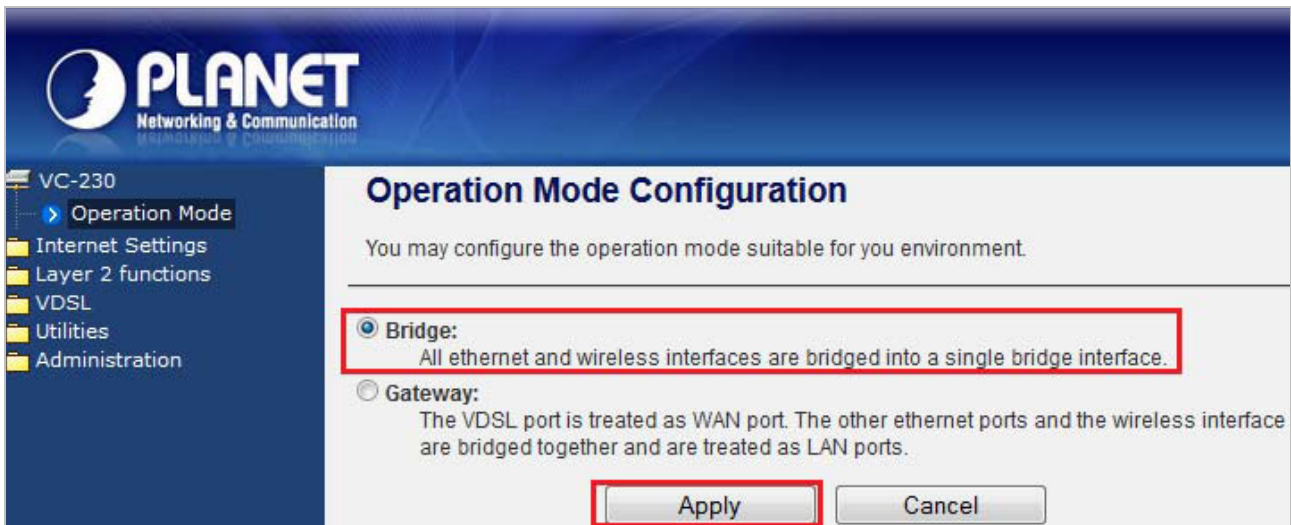

4.3.1 Bridge Mode for LAN-to-LAN connection

Web UI Configuration

For VDSL2 ROUTER CO Side

Step 1: Select the Bridge mode.

Step 2: Set up your LAN IP; for example, we use 192.168.1.1 / 255.255.255.0 and enable DHCP server for VDSL2 ROUTER CO side.

Local Area Network (LAN) Settings

You may enable/disable networking functions and configure their parameters as your wish.

| LAN Setup | |
|----------------------|-------------------|
| IP Address | 192.168.1.1 |
| Subnet Mask | 255.255.255.0 |
| Default Gateway | |
| Primary DNS Server | 168.95.1.1 |
| Secondary DNS Server | 192.168.0.1 |
| MAC Address | 00:30:4F:12:34:06 |
| DHCP Type | Server |
| Start IP Address | 192.168.1.2 |
| End IP Address | 192.168.1.100 |
| Subnet Mask | 255.255.255.0 |
| Primary DNS Server | 192.168.1.1 |

Step 3: Modify your VDSL mode. Select the CO mode.

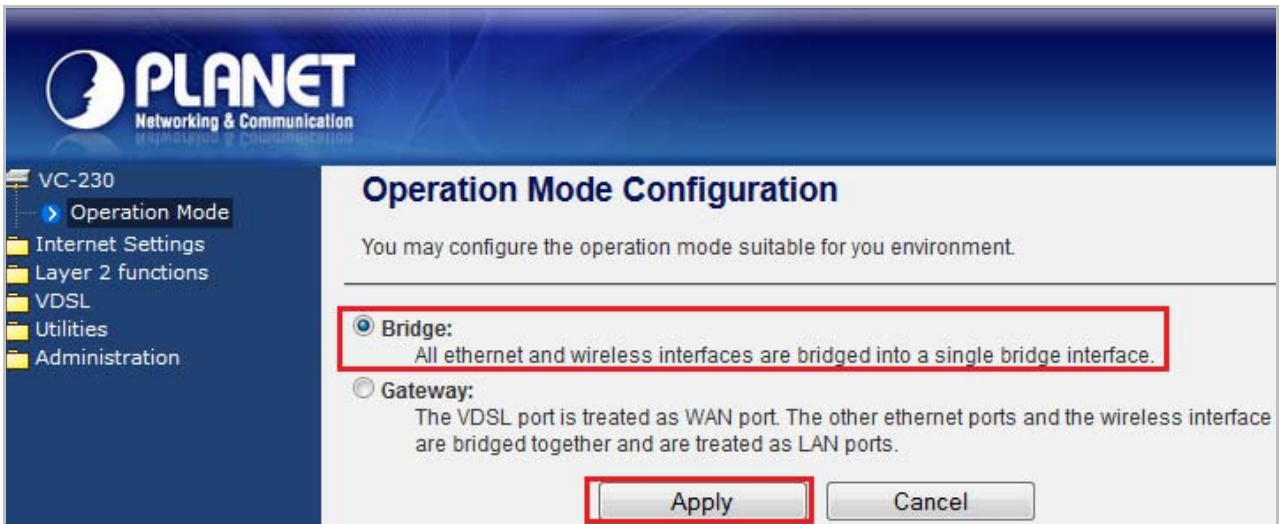

VDSL Configuration

You may setup the VDSL operating mode in this page. CO mode make the Router as VDSL 2 active-end to train with its link partner. Parameters are also available for setting. And set the VDSL mode to CPE will make the Router as passive VDSL interface that training with VDSL active partner.

| VDSL Configuration | |
|----------------------|---|
| Mode | <input checked="" type="radio"/> CO <input type="radio"/> CPE |
| VDSL Profile | AnnexA_R_POTS_D-32_EU-32_30a |
| VDSL SNR | 6 db(range 0-31) |
| Line Type | Interleave |
| Interleave Max delay | 8 ms (range 2-255) |
| INP | 3 (0.1 symbols,range 30a:1-17 ,others:1-18) |

For VDSL2 ROUTER CPE Side

Step 1: Select the Bridge mode.

PLANET
Networking & Communication

VC-230

- Operation Mode
- Internet Settings
- Layer 2 functions
- VDSL
- Utilities
- Administration

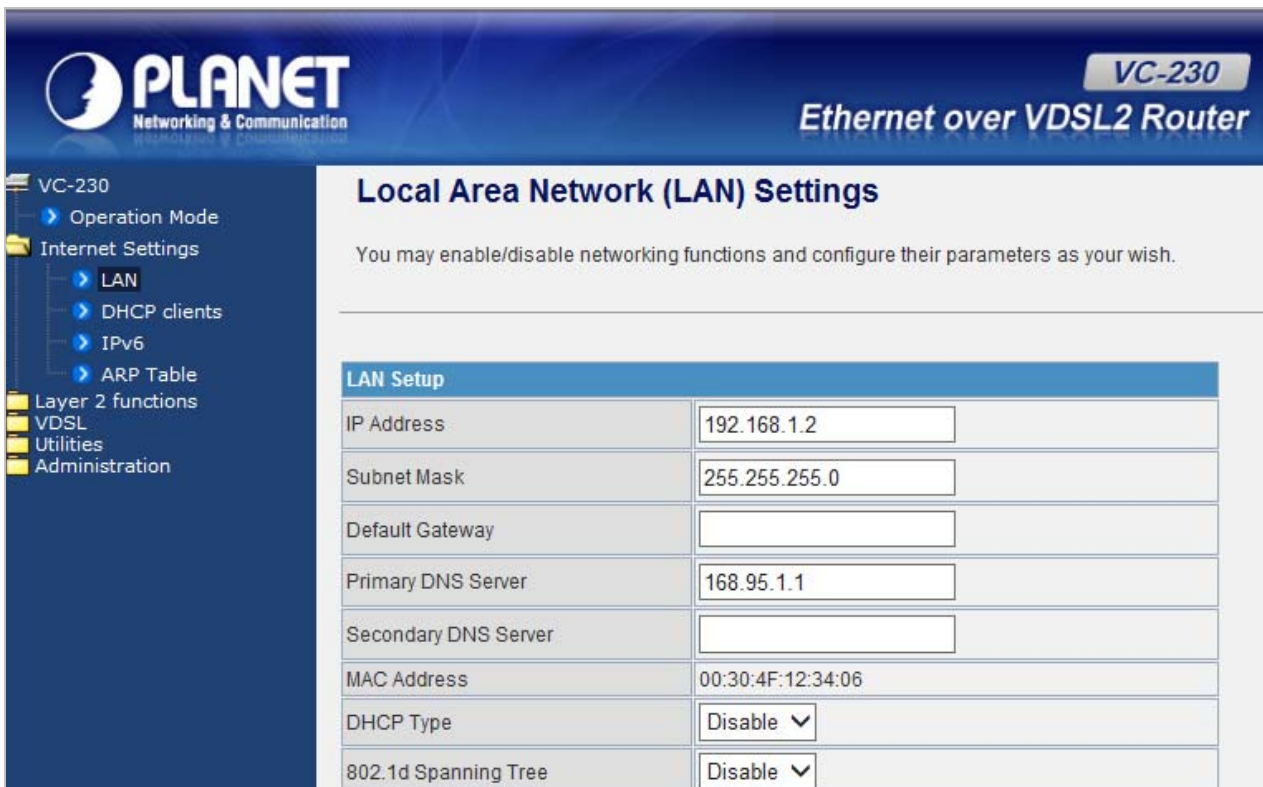

Operation Mode Configuration

You may configure the operation mode suitable for you environment.

Bridge:
All ethernet and wireless interfaces are bridged into a single bridge interface.

Gateway:
The VDSL port is treated as WAN port. The other ethernet ports and the wireless interface are bridged together and are treated as LAN ports.

Step 2: Set up your LAN IP; for example, we use the 192.168.1.2 / 255.255.255.0 and disable DHCP server for VDSL2 ROUTER CPE side.

PLANET

| Primary Domain Name Server | 139.175.252.16 |
| Secondary Domain Name Server | 00:30:4F:30:52:11 |
| MAC Address | 00:30:4F:12:34:06 |

Chapter 5. System Settings

Determine your Connection Settings

Before you configure the router, you need to know the connection information supplied by your Internet service provider.

Connecting the VDSL 2 Router to your Network

Unlike a simple hub or switch, the setup of the VDSL Router consists of more than simply plugging everything together. Because the Router acts as a DHCP server, you will have to set some values within the Router, and also configure your networked PCs to accept the IP Addresses the Router chooses to assign them.

Generally there are several different operating modes for your applications. And you can know which mode is necessary for your system from ISP. These modes are router, bridge, and PPPoE+NAT.

Configuring with Web Browser

It is advisable to change the administrator password to safeguard the security of your network. To configure the router, open your browser, type "**http://192.168.1.1**" into the address bar and click "**Go**" to get to the login page.

Save this address in your Favorites for future reference.

At the User Name prompt, type "**admin**", and the Password prompt, type "**admin**". You can change these later if you wish. Click "**OK**" to login the router and you can start to configure it now.

5.1 Operation Mode

The VC-230 supports two operation modes – Bridge and Gateway; the VC-230N supports three operation modes – Bridge, Gateway and WISP. Currently, the default setting is Gateway mode.

Please note that Bridge mode and Gateway mode cannot be used simultaneously.

For **Bridge mode**, all interfaces are bridged into a single bridge interface.

For **Gateway mode**, the VDSL port is treated as WAN port. The other interfaces are bridged together and are treated as LAN ports.

For **WISP Mode**, all the Ethernet ports (including VDSL2) are bridged together and the wireless interface of this router will come to WAN port for connecting to an ISP's Access Point as Internet connection. The NAT is enabled and PCs in Ethernet ports share the same IP to ISP through wireless LAN. The connection type can be set up on WAN page by using PPPoE, DHCP client, PPTP/L2TP client or static IP.

If you select **Bridge mode** and **WAN configuration** in Internet Settings that are not available, firewall functions on the left page are not available, either.

- Utilities
- Administration

Operation Mode Configuration

You may configure the operation mode suitable for you environment.

Bridge:
All ethernet and wireless interfaces are bridged into a single bridge interface.

Gateway:
The VDSL port is treated as WAN port. The other ethernet ports and the wireless interface are bridged together and are treated as LAN ports.

WISP:
All the Ethernet ports are bridged together and the wireless interface will connect to the access point of ISP. The NAT is enabled and PCs in Ethernet ports share the same public IP from ISP through wireless LAN. Users can setup the connection type in WAN page by using PPPoE, DHCP client, or static IP.

Wireless Mode:

After finishing the settings, click **Apply** to save the settings and enable the new configuration to take effect. Click **Cancel** to close without saving.

5.2 Internet Settings

5.2.1 WAN

The WAN Settings screen allows you to specify the type of Internet connection. The WAN settings offer the following selections for the router's WAN port, STATIC (fixed IP), DHCP (Auto config), PPPoE, L2TP, and PPTP.

Wide Area Network (WAN) Settings

You may choose different connection type suitable for your environment. Besides, you may also configure parameters according to the selected connection type.

WAN Connection Type:

Static Mode

| | |
|----------------------|---|
| IP Address | <input type="text" value="210.66.155.70"/> |
| Subnet Mask | <input type="text" value="255.255.255.0"/> |
| Default Gateway | <input type="text" value="210.66.155.94"/> |
| MTU | <input type="text" value="1500"/> |
| Primary DNS Server | <input type="text" value="139.175.55.244"/> |
| Secondary DNS Server | <input type="text" value="139.175.252.16"/> |

MAC Clone

Enabled

➤ STATIC (FIXED IP)

Select **STATIC (fixed IP)** in the **WAN Connection Type** drop-down list and the following page appears:

Wide Area Network (WAN) Settings

You may choose different connection type suitable for your environment. Besides, you may also configure parameters according to the selected connection type.

WAN Connection Type:

Static Mode

| | |
|----------------------|----------------------|
| IP Address | <input type="text"/> |
| Subnet Mask | <input type="text"/> |
| Default Gateway | <input type="text"/> |
| Primary DNS Server | <input type="text"/> |
| Secondary DNS Server | <input type="text"/> |

MAC Clone

Enabled

The page includes the following fields:

| Object | Description |
|------------------------------|---|
| IP Address | Enter the IP address in dotted-decimal notation provided by your ISP. |
| Subnet Mask | Enter the subnet Mask in dotted-decimal notation provided by your ISP, usually is 255.255.255.0 |
| Default Gateway | Enter the gateway IP address in dotted-decimal notation provided by your ISP. |
| Primary/Secondary DNS | Enter one or two DNS addresses in dotted-decimal notation provided by your ISP. |
| MAC Clone | Enable or disable MAC clone. |

➤ **DHCP (AUTO CONFIG)**

Select **DHCP (Auto config)** in the **WAN Connection Type** drop-down list and the following page appears. If the WAN connection type is set to **DHCP**, the device automatically obtains the IP address, gateway and DNS address from the DHCP server on WAN interface.

Wide Area Network (WAN) Settings

You may choose different connection type suitable for your environment. Besides, you may also configure parameters according to the selected connection type.

WAN Connection Type: DHCP (Auto config) ▼

DHCP Mode

| IP Address | Fill in the IP address for WAN interface. |
| Subnet Mask | Fill in the subnet mask for WAN interface. |
| Default Gateway | Fill in the default gateway for WAN interface out going data packets. |
| Operation Mode | Keep Alive: Keep the PPTP connection all the time. Please also configure the Redial Period field. Manual: No function is enabling. |
| MAC Clone | Enable or disable MAC clone. |

5.2.2 LAN

This page allows you to enable or disable networking functions and configure their parameters according to your practice.

Local Area Network (LAN) Settings

You may enable/disable networking functions and configure their parameters as your wish.

LAN Setup

| | |
|----------------------|---|
| IP Address | <input type="text" value="192.168.1.1"/> |
| Subnet Mask | <input type="text" value="255.255.255.0"/> |
| MAC Address | 00:30:4F:12:34:06 |
| DHCP Type | Server <input type="button" value="v"/> |
| Start IP Address | <input type="text" value="192.168.1.2"/> |
| End IP Address | <input type="text" value="192.168.1.100"/> |
| Subnet Mask | <input type="text" value="255.255.255.0"/> |
| Primary DNS Server | <input type="text" value="192.168.1.1"/> |
| Secondary DNS Server | <input type="text" value="168.95.1.1"/> |
| Default Gateway | <input type="text" value="192.168.1.1"/> |
| Lease Time | <input type="text" value="86400"/> |
| Statically Assigned | MAC: <input type="text"/> IP: <input type="text"/> |

The page includes the following fields:

| Object | Description |
|--------------------|--|
| MAC Address | The physical address of the Router, as seen from the LAN. The value can't be changed. |
| IP Address | Enter the IP address of your Router or reset it in dotted-decimal notation (factory default: 192.168.1.1). |
| Subnet Mask | An address code that determines the size of the network. Normally use 255.255.255.0 as the subnet mask. |
| MAC Address | MAC address of LAN port (Read-only). |

| | |
|-----------------------------|--|
| DHCP Type | <ul style="list-style-type: none"> ■ Disable: Disable DHCP server on LAN side. ■ Server: Enable DHCP server on LAN side. |
| Start IP Address | Fill in the start IP address to allocate a range of IP addresses; client with DHCP function set will be assigned an IP address from the range. |
| End IP Address | Fill in the end IP address to allocate a range of IP addresses; client with DHCP function set will be assigned an IP address from the range. |
| Subnet Mask | The subnet mask of dynamic IP. |
| Primary DNS Server | The primary DNS server address. |
| Secondary DNS Server | The secondary DNS server address. |
| Default Gateway | Fill in the default gateway for LAN interfaces out going data packets. |
| Lease Time | Fill in the lease time of DHCP server function. |
| Statically Assigned | Assign IP to the assigned MAC address. Enter the assigned MAC address and IP in the corresponding fields. |
| 802.1d Spanning Tree | Select enable or disable the IEEE 802.1d Spanning Tree function from pull-down menu. |
| LLTD | Select enable or disable the Link Layer Topology Discover function from pull-down menu. |
| IGMP Proxy | Select enable or disable the IGMP proxy function from pull-down menu. |
| UPnP | Select enable or disable the UPnP protocol from pull-down menu. |
| Router Advertisement | You can select Enable or Disable. |
| PPPoE Relay | You can select Enable or Disable. |
| DNS Proxy | Select enable or disable the DNS Proxy function from pull-down menu. |

5.2.3 DHCP clients

You can view the information about DHCP clients on the page.

| DHCP Client List | | | |
|--------------------------------------|-------------------|-------------|------------|
| You could monitor DHCP clients here. | | | |
| DHCP Clients | | | |
| Hostname | MAC Address | IP Address | Expires in |
| ENM-2-PC | 00:16:D4:FF:D2:E3 | 192.168.1.2 | 23:59:46 |

5.2.4 Advanced Routing

You can add or delete routing rules, and enable or disable dynamic routing protocol on the page.

Static Routing Settings

You may add and remote custom Internet routing rules, and/or enable dynamic routing exchange protocol here.

Add a routing rule

| | |
|-------------|---|
| Destination | <input style="width: 90%;" type="text"/> |
| Range | Host ▼ |
| Gateway | <input style="width: 90%;" type="text"/> |
| Interface | LAN ▼ <input style="width: 80%;" type="text"/> |
| Comment | <input style="width: 90%;" type="text"/> |

The page includes the following fields:

| Object | Description |
|--------------------|---|
| Destination | Enter the legal destination IP address. |
| Range | Destination IP address is a host address or the network address. |
| Gateway | Enter the specific gateway. |
| Interface | The interface for this route. You can select LAN, WAN and Custom. |
| Comment | Add the description of this route. |

Current Routing Table in the System

You can delete or reset the routing rules.

Dynamic Routing Settings

You can enable or disable the **RIP**.

After finishing the settings above, click **Apply** to enable the new routing rule to take effect. Otherwise, click **Reset** to cancel the new routing rule.

5.2.5 IPv6

You may set up rules to provide Quality of Service (QoS) guarantee for some specific applications. On the page, you can enable or disable Quality of Service.

IPv6 Configuration

You may configure IPv6 settings here.

IPv6 Settings

| | |
|---------|--|
| Address | <input style="width: 90%;" type="text" value="::192.168.1.1"/> |
| Prefix | <input style="width: 90%;" type="text" value="96"/> |
| Router | <input style="width: 90%;" type="text" value="::"/> |

The page includes the following fields:

| Object | Description |
|----------------|--------------------------------------|
| Address | You can set up IPV6 address here. |
| Prefix | You can set up the IPv6 Prefix here. |
| Router | You can set up the IPv6 router here. |

5.2.6 ARP Table

You can view the information about ARP Table on the page.

ARP Table

You could monitor ARP Table here.

ARP Table

| IP address | HW type | Flags | HW address | Mask | Device |
|---------------|---------|-------|-------------------|------|--------|
| 192.168.1.100 | 0x1 | 0x2 | B8:70:F4:B5:E5:DA | * | br0 |

5.3 Wireless Setting (For VC-230N only)

5.3.1 Basic

You can configure the minimum number of wireless settings for communication, such as network name (SSID) and channel.

| Wireless Network | |
|-------------------------------|--|
| Driver Version | 2.6.0.0 |
| WiFi On/Off | Enable <input type="button" value="v"/> |
| Network Mode | 11b/g/n mixed mode <input type="button" value="v"/> |
| Network Name(SSID) | VC230N <input type="checkbox"/> Hidden <input type="checkbox"/> Isolated |
| Multiple SSID1 | <input type="text"/> <input type="checkbox"/> Hidden <input type="checkbox"/> Isolated |
| Multiple SSID2 | <input type="text"/> <input type="checkbox"/> Hidden <input type="checkbox"/> Isolated |
| Multiple SSID3 | <input type="text"/> <input type="checkbox"/> Hidden <input type="checkbox"/> Isolated |
| Multiple SSID4 | <input type="text"/> <input type="checkbox"/> Hidden <input type="checkbox"/> Isolated |
| Broadcast Network Name (SSID) | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| AP Isolation | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| MBSSID AP Isolation | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| BSSID | 00:30:4F:12:34:00 |
| Frequency (Channel) | AutoSelect <input type="button" value="v"/> |

The page includes the following fields:

| Object | Description |
|------------------------------|---|
| Driver Version | Show the driver version. |
| WiFi On/Off | Enable or disable the wireless LAN. |
| Network Mode | This field determines the wireless mode which the Router works on. |
| Network Name (SSID) | Enter a value of up to 32 characters. The same name of SSID (Service Set Identification) must be assigned to all wireless devices in your network. Considering your wireless network security, the default SSID is set to be default. This value is case-sensitive. For example, <i>PLANET</i> is NOT the same as planet. |
| Multiple SSID 1/2/3/4 | There are 4 multiple SSIDs. Enter their descriptive names that you want to use. |

| | |
|--------------------------------------|--|
| Broadcast Network Name (SSID) | Select Enable to allow the SSID broadcast on the network, so that the STA can find it. Otherwise, the STA cannot find it. |
| AP Isolation | Enable or disable AP Isolation. When many clients connect to the same access point, they can access each other. If you want to disable the access between clients which connect the same access point, you can enable this function. |
| MBSSID AP Isolation | Enable or disable MBSSID AP Isolation. |
| BSSID | Basic Service Set Identifier. This is the assigned MAC address of the station in the access point. This unique identifier is in Hex format and can only be edited when Multi BSSID is enabled in the previous screen. |
| Frequency (Channel) | A channel is the radio frequency used by wireless device. Channels available depend on your geographical area. You may have a choice of channels (for your region) and you should use a different channel from an adjacent AP to reduce the interference. The Interference and degrading performance occurs when radio signals from different APs overlap. |

HT Physical Mode

| HT Physical Mode | |
|--------------------------------|---|
| Operating Mode | <input checked="" type="radio"/> Mixed Mode <input type="radio"/> Green Field |
| Channel BandWidth | <input type="radio"/> 20 <input checked="" type="radio"/> 20/40 |
| Guard Interval | <input type="radio"/> Long <input checked="" type="radio"/> Auto |
| MCS | Auto ▼ |
| Reverse Direction Grant (RDG) | <input type="radio"/> Disable <input checked="" type="radio"/> Enable |
| Space Time Block Coding (STBC) | <input type="radio"/> Disable <input checked="" type="radio"/> Enable |
| Aggregation MSDU (A-MSDU) | <input checked="" type="radio"/> Disable <input type="radio"/> Enable |
| Auto Block ACK | <input type="radio"/> Disable <input checked="" type="radio"/> Enable |
| Decline BA Request | <input checked="" type="radio"/> Disable <input type="radio"/> Enable |
| HT Disallow TKIP | <input type="radio"/> Disable <input checked="" type="radio"/> Enable |
| Other | |
| HT TxStream | 2 ▼ |
| HT RxStream | 2 ▼ |

The page includes the following fields:

| Object | Description |
|---------------------------------------|---|
| Operation Mode | Select Mixed Mode or Green Field. |
| Channel Bandwidth | Select 20 or 20/40. |
| Guard Interval | Select 20 or 20/40. |
| MCS | Select the proper value from 0 to 32. Auto is the default value. |
| Reverse Direction Grant (RDG) | <p>The purpose of the 802.11n RD protocol is to more efficiently transfer data between two 802.11 devices during a TXOP by eliminating the need for either device to initiate a new data transfer.</p> <p>Select Disable or Enable.</p> |
| Space Time Block Coding (STBC) | <p>Space time block coding is a technique used in wireless communications to transmit multiple copies of a data stream across a number of antennas and to exploit the various received versions of the data to improve the reliability of data-transfer.</p> <p>Select Disable or Enable.</p> |
| Aggregation MSDU (A-MSDU) | <p>A-MSDU aggregation, which allows several MAC-level service data units (MSDUs) to be aggregated into a single MPDU.</p> <p>Select Disable or Enable.</p> |
| Auto Block ACK | <p>Not to respond to each sent data (ACK), but to block unit (Block).</p> <p>Select Disable or Enable.</p> |
| Decline BA Request | <p>To decline the Block ACK request by the other devices.</p> <p>Select Disable or Enable.</p> |
| HT Disallow TKIP | <p>Using TKIP, the operation will be in 802.11g.</p> <p>Select Disable or Enable.</p> |
| HT TxStream | Select 1 or 2. |
| HT RxStream | Select 1 or 2. |

5.3.2 Advanced

This page includes more detailed settings for the AP. **Advanced Wireless Settings** page includes items that are not available on the **Basic Wireless Settings** page, such as basic data rates, beacon interval, and data beacon rate.

| Advanced Wireless | |
|-------------------------|---|
| BG Protection Mode | Auto ▼ |
| Beacon Interval | 100 ms (range 20 - 999, default 100) |
| Data Beacon Rate (DTIM) | 1 ms (range 1 - 255, default 1) |
| Fragment Threshold | 2346 (range 256 - 2346, default 2346) |
| RTS Threshold | 2347 (range 1 - 2347, default 2347) |
| TX Power | 100 (range 1 - 100, default 100) |
| Short Preamble | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| Short Slot | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Tx Burst | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Pkt_Aggregate | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Country Code | ETSI (1-13) ▼ |

The page includes the following fields:

| Object | Description |
|-------------------------------|--|
| BG Protection Mode | It provides 3 options, including Auto, On, and Off. The default BG protection mode is Auto . |
| Beacon Interval | The interval time range is between 20ms and 999ms for each beacon transmission. The default value is 100ms. |
| Date Beacon Rate (DTM) | The DTM range is between 1 ms and 255 ms. The default value is 1ms. |
| Fragment Threshold | This is the maximum data fragment size (between 256 bytes and 2346 bytes) that can be sent in the wireless network before the router fragments the packet into smaller data frames. The default value is 2346. |
| RTS Threshold | Request to send (RTS) is designed to prevent collisions due to hidden node. A RTS defines the biggest size data frame you can send before a RTS handshake invoked. The RTS threshold value is between 1 and |

| | |
|-----------------------|---|
| | 2347. The default value is 2347. |
| Tx Power | The Tx Power range is between 1 and 100. The default value is 100. |
| Short Preamble | Short preambles work with every wireless type other than older types with limited transmission rates in the 1 to 2 Mbps range. Select Disable or Enable. |
| Short Slot | Short slot time reduces the slot time from 20 microseconds to 9 microseconds, thereby increasing throughput. Select Disable or Enable. |
| Tx Burst | TX burst is a feature for wireless device speed up the connection in the same environment as it is without. Select Disable or Enable. |
| Pkt_Aggregate | Select Disable or Enable. |
| Country Code | Select the region which area you are. It provides three regions in the drop-down list. |

| Wi-Fi Multimedia | |
|------------------|---|
| WMM Capable | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| APSD Capable | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| DLS Capable | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |

| Object | Description |
|---------------------|---|
| WMM Capable | WiFi Multimedia (WMM) refers to QoS over WiFi. It is suitable for simple applications that require QoS, such as Voice over IP (VoIP) Enable or disable WMM. |
| APSD Capable | Automatic power save delivery (APSD) is an efficient power management method. Enable or disable APSD. |
| DLS Capable | Direct-Link Setup (DLS) are able to automatically create a secure, direct link between them after accessing the Wi-Fi network, removing the need to transmit data through the access point. Enable or disable DLS. |

5.3.3 Security

Choose **Wireless Settings>Security** and the following page appears. It allows you to modify the settings to prevent the unauthorized accesses.

Wireless Security/Encryption Settings

Setup the wireless security and encryption to prevent from unauthorized access and monitoring.

Select SSID

SSID choice
VC230N ▾

"VC230N"

Security Mode
Disable ▾

Access Policy

Policy
Disable ▾

Add a station Mac:

Apply
Cancel

The page includes the following fields:

| Object | Description |
|----------------------|--|
| SSID choice | Select SSID in the drop-down list. |
| Security Mode | There are 5 options, including Disable , OPENWEP , WPA-PSK , WPA2-PSK , and WPAPSKWPA2PSK . |

[EXAMPLE]

Take WPAPSKWPA2PSK for example. Select WPAPSKWPA2PSK in the **Security Mode** down-list. The page shown in the following page appears:

| Wireless Security/Encryption Settings | |
|--|---|
| Setup the wireless security and encryption to prevent from unauthorized access and monitoring. | |
| Select SSID | |
| SSID choice | VC230N ▼ |
| "VC230N" | |
| Security Mode | WPAPSKWPA2PSK ▼ |
| WPA | |
| WPA Algorithms | <input type="radio"/> TKIP <input checked="" type="radio"/> AES <input type="radio"/> TKIPAES |
| Pass Phrase | 12345678 |
| Key Renewal Interval | 3600 seconds (0 ~ 4194303) |

| Access Policy | |
|--------------------|----------------------|
| Policy | Disable ▼ |
| Add a station Mac: | <input type="text"/> |

Access Policy

| Object | Description |
|--------------------------|--|
| Policy | There are three options, including Disable, Allow, and Reject. Select Allow, only the clients whose MAC address is listed can access the router. Select Reject, the clients whose MAC address is listed are denied to access the router. |
| Add a station MAC | If you want to add a station MAC, enter the MAC address of the wireless station that are allowed or denied access to your router in this address field. |

5.3.4 WDS

WDS (Wireless Distribution System) allows access points to communicate with one another wirelessly in a standardized way. It can also simplify the network infrastructure by reducing the amount of cabling required. Basically the access points will act as a client and an access point at the same time.

WDS is incompatible with WPA. Both features cannot be used at the same time. A WDS link is bi-directional, so the AP must know the MAC address of the other AP, and the other AP must have a WDS link back to the AP.

Dynamically assigned and rotated encryption key are not supported in a WDS connection. This means that WPA and other dynamic key assignment technologies may not be used. Only Static WEP keys may be used in a WDS connection, including any STAs that are associated with a WDS repeating AP.

Enter the MAC address of the other APs that you want to link to and click enable. Supports up to 4 point to multipoint WDS links, check Enable WDS and then enable on the MAC addresses.

WDS Mode: There are four options, including **Disable**, **Lazy Mode**, **Bridge Mode**, and **Repeater Mode**.

Disable

Select Disable to disable the WDS mode.

Lazy Mode

| Wireless Distribution System(WDS) | |
|-----------------------------------|----------------------|
| WDS Mode | Lazy Mode ▾ |
| Phy Mode | CCK ▾ |
| EncrypType 1 | NONE ▾ |
| Encryp Key 1 | <input type="text"/> |
| EncrypType 2 | NONE ▾ |
| Encryp Key 2 | <input type="text"/> |
| EncrypType 3 | NONE ▾ |
| Encryp Key 3 | <input type="text"/> |
| EncrypType 4 | NONE ▾ |
| Encryp Key 4 | <input type="text"/> |

The page includes the following fields:

| Object | Description |
|-------------|---|
| Lazy Mode | The VC-230N WDS Lazy mode is allowed the other VC-230N WDS bridge / repeater mode link automatically. |
| Phy Mode | It provides 4 options, including CCK , OFDM , HTMIX , and GREENFIELD . |
| Encryp Type | It provides 4 options, including None , WEP , TKIP , and AES . |

Bridge Mode/ Repeater Mode

| Wireless Distribution System(WDS) | |
|-----------------------------------|----------------------|
| WDS Mode | Bridge Mode ▾ |
| Phy Mode | CCK ▾ |
| EncrypType 1 | NONE ▾ |
| Encryp Key 1 | <input type="text"/> |
| AP MAC Address 1 | <input type="text"/> |
| EncrypType 2 | NONE ▾ |
| Encryp Key 2 | <input type="text"/> |
| AP MAC Address 2 | <input type="text"/> |
| EncrypType 3 | NONE ▾ |
| Encryp Key 3 | <input type="text"/> |
| AP MAC Address 3 | <input type="text"/> |
| EncrypType 4 | NONE ▾ |
| Encryp Key 4 | <input type="text"/> |
| AP MAC Address 4 | <input type="text"/> |

| Object | Description |
|----------------|---|
| WDS Mode | Select Bridge Mode or Repeater Mode. |
| Phy Mode | It provides 4 options, including CCK, OFDM, HTMIX, and GREENFIELD. |
| Encryp Type | It provides 4 options, including None, WEP, TKIP, and AES. |
| AP MAC Address | It provides 4 AP MAC Address. Enter the MAC address of the other APs. |

5.3.5 WPS

You can enable or disable the WPS function on this page.

Wi-Fi Protected Setup

You could setup security easily by choosing PIN or PBC method to do Wi-Fi Protected Setup.

| WPS Config | |
|--------------------------------------|--|
| WPS: | <input type="button" value="Disable"/> <input style="background-color: #4f81bd; color: white;" type="button" value="Enable"/> |
| <input type="button" value="Apply"/> | |

Select **Enable** in the WPS drop-down list. Click **Apply** and the following page appear.

WPS Summary

| | |
|--|--|
| WPS Current Status: | Idle |
| WPS Configured: | No |
| WPS SSID: | VC230N |
| WPS Auth Mode: | Open |
| WPS Encryp Type: | None |
| WPS Default Key Index: | 1 |
| WPS Key(ASCII) | |
| AP PIN: | 11929604 <input type="button" value="Generate"/> |
| <input type="button" value="Reset OOB"/> | |

WPS Progress

| | |
|--------------------------------------|--|
| WPS mode | <input checked="" type="radio"/> PIN <input type="radio"/> PBC |
| PIN | <input type="text"/> |
| <input type="button" value="Apply"/> | |

WPS Status

WSC: Idle

<
>

WPS Summary

It displays the WPS information, such as WPS Current Status, WPS Configured, and WPS SSID.

| Object | Description |
|-----------|---|
| Reset OOB | Reset to out of box (OoB) configuration |

WPS Progress

There are two ways for you to enable WPS function: PIN or PBC. You can use a push button configuration (PBC) on the Wi-Fi router. If there is no button, enter 4 digit PIN code. Each STA supporting WPS comes with a hard-coded PIN code.

| Object | Description |
|--------|--|
| PIN | If you select PIN mode, you need to enter the PIN number in the field. |

WPS Status

It displays the information about WPS status.

5.3.6 Station List

Through this page, you can easily identify the connected wireless stations. It automatically observes the ID of connected wireless station (if specified), MAC address, and current status.

| Station List | | | | | | |
|--|-----|-------------------|-------------------|-----|--------------|----------------------|
| You could monitor stations which associated to this AP here. | | | | | | |
| Wireless Network | | | | | | |
| MAC Address | Aid | Power saving Mode | MIMO Power Saving | MCS | RF Bandwidth | Short Guard Interval |
| 00:E0:4C:10:35:98 | 1 | Disable | Disabled | 7 | 40MHz | Enable |

5.3.7 Statistics

This page will show you the connected TX, RX statistics.

| AP Wireless Statistics | |
|---|----------------|
| Wireless TX and RX Statistics | |
| Transmit Statistics | |
| Tx Success | 324 |
| Tx Retry Count | 0, PER=0.0% |
| Tx Fail after retry | 0, PLR=0.0e+00 |
| RTS Successfully Receive CTS | 0 |
| RTS Fail To Receive CTS | 0 |
| Receive Statistics | |
| Frames Received Successfully | 190 |
| Frames Received With CRC Error | 165, PER=46.5% |
| SNR | |
| SNR | n/a, n/a, n/a |
| <input type="button" value="Reset Counters"/> | |

5.4 Firewall

The VDSL Router provides the fully firewall functions, such as MAC/IP/Port Filtering, Port Forwarding, DMZ, SPI Firewall and Content Filtering. It serves as an Internet firewall to protect your network from being accessed by outside users.

5.4.1 MAC/IP/Port Filtering

Use the MAC/IP/Port filters to deny / allow particular LAN IP addresses from accessing the Internet. You can deny / allow specific port numbers or all ports for a specific IP address.

You may set up firewall rules to protect your network from malicious activity on the Internet. It is also convenient for you to delete these settings.

| Basic Settings | |
|---|---|
| MAC/IP/Port Filtering | Disable ▾ |
| Default Policy -- The packet that don't match with any rules would be: | Dropped. ▾ |
| <input type="button" value="Apply"/> <input type="button" value="Reset"/> | |
| MAC/IP/Port Filter Settings | |
| Source MAC address | <input type="text"/> |
| Dest IP Address | <input type="text"/> |
| Source IP Address | <input type="text"/> |
| Protocol | None ▾ |
| Dest Port Range | <input type="text"/> - <input type="text"/> |
| Source Port Range | <input type="text"/> - <input type="text"/> |
| Action | Accept ▾ |
| Comment | <input type="text"/> |
| (The maximum rule count is 32.) | |
| <input type="button" value="Apply"/> <input type="button" value="Reset"/> | |

Basic Settings

| Object | Description |
|-----------------------|--|
| MAC/IP/Port Filtering | Enable or disable the MAC/IP/Port filtering function. |
| Default Policy | The Packet that does not match any rules would be dropped or accepted. |

MAC/IP/Port Filter Settings

| Object | Description |
|------------------------|--|
| Source MAC address | Enter the MAC address that matches the source address of the packet (optional). |
| Dest IP Address | Enter the IP address that matches the destination address of the packet (optional). |
| Source IP Address | Enter the IP address that matches the source address of the packet (optional). |
| Protocol | There are 4 options, including none, TCP, UDP and ICMP. |
| Destination Port Range | After setting a valid protocol, you may enter the UPD or TCP destination port range. |
| Source Port Range | After setting a valid protocol, you may enter the UPD or TCP source port range. |
| Action | Select Drop or Accept in the drop down list. |
| Comment | Add description for this rule. |

The maximum rule number you can add is 32.

| Current MAC/IP/Port filtering rules in system: | | | | | | | | | |
|--|--------------------|-----------------|-------------------|----------|-----------------|-------------------|--------|---------|---------|
| No. | Source MAC address | Dest IP Address | Source IP Address | Protocol | Dest Port Range | Source Port Range | Action | Comment | Pkt Cnt |
| Others would be dropped | | | | | | | | | - |

Current MAC/IP/Port Filtering Rules in System

If you want to delete some rules in the table above, select the rules, and then click **Delete Selected**. Otherwise, click **Reset**.

5.4.2 Port Forwarding (Virtual Server)

This page allows you to configure to re-direct a particular range of service port numbers from the Internet network to a particular LAN IP address, and set virtual server to provide services on the Internet.

| Port Forwarding | | | | |
|---|---|-------------|-----------|---------|
| Port Forwarding | Enable ▾ | | | |
| IP Address | <input type="text"/> | | | |
| Port Range | <input type="text"/> - <input type="text"/> | | | |
| Protocol | TCP&UDP ▾ | | | |
| Comment | <input type="text"/> | | | |
| (The maximum rule count is 32.) | | | | |
| <input type="button" value="Apply"/> <input type="button" value="Reset"/> | | | | |
| Current Port Forwarding in system: | | | | |
| No. | IP Address | Port Range | Protocol | Comment |
| 1 <input type="checkbox"/> | 192.168.1.101 | 8080 - 8080 | TCP + UDP | Test |
| <input type="button" value="Delete Selected"/> <input type="button" value="Reset"/> | | | | |

Port Forwarding Settings

| Object | Description |
|--------------------------------|--|
| Virtual Server Settings | Enable or disable this function. After selecting Enable , you can set the following parameters. |
| IP Address | Enter the virtual server IP address in internal network. |
| Port Range: | You can setup your port range for your WAN side. |
| Protocol | There are 3 options, including none, TCP&UDP, TCP and UDP. |
| Comment | Add description for this rule. |

The maximum rule number you can add is 32.

| Virtual Server | | | | | |
|---|---------------|-------------|--------------|----------|---------|
| Virtual Server | Enable ▾ | | | | |
| IP Address | 192.168.1.102 | | | | |
| Public Port | 53 | | | | |
| Private Port | 53 | | | | |
| Protocol | TCP&UDP ▾ | | | | |
| Comment | Test × | | | | |
| (The maximum rule count is 32.) | | | | | |
| <input type="button" value="Apply"/> <input type="button" value="Reset"/> | | | | | |
| Current Virtual Servers in system: | | | | | |
| No. | IP Address | Public Port | Private Port | Protocol | Comment |
| <input type="button" value="Delete Selected"/> <input type="button" value="Reset"/> | | | | | |

Virtual Server Settings

| Object | Description |
|--------------------------------|--|
| Virtual Server Settings | Enable or disable this function. After selecting Enable , you can set the following parameters. |
| IP Address | Enter the virtual server IP address in internal network. |
| Public Port | Enter the WAN service port. |
| Private Port | Enter the LAN service port. |
| Protocol | There are 3 options, including none, TCP&UDP, TCP and UDP. |
| Comment | Add description for this rule. |

The maximum rule number you can add is 32.

5.4.3 DMZ

DMZ (De-militarized Zone) allows a single computer on your LAN to expose ALL of its ports to the Internet. Enter the IP address of that computer as a DMZ (De-militarized Zone) host with unrestricted Internet access. When doing this, the DMZ host is no longer behind the firewall.

This page allows you to set a De-militarized Zone (DMZ) to separate internal network and Internet.

| DMZ Settings | |
|---|--------------------------------------|
| DMZ Settings | Disable ▾ |
| DMZ Address | <input type="text"/> |
| <input type="checkbox"/> Except TCP port 80 | |
| <input type="button" value="Apply"/> | <input type="button" value="Reset"/> |

DMZ Settings: Enable or disable this function. After selecting Enable, you can set the DMZ IP address.

DMZ IP Address: Enter the DMZ host IP address.

5.4.4 System Security Settings

Choose **Firewall > System Security** and the following page appears. This page allows you to configure the system firewall to protect Router from attacking.

| Remote management | |
|----------------------------------|-----------|
| Remote management (via WAN) | Deny ▼ |
| Remote Web Management Port | 80 |
| Ping form WAN Filter | |
| Ping form WAN Filter | Disable ▼ |
| Block Port Scan | |
| Block port scan | Disable ▼ |
| Block SYN Flood | |
| Block SYN Flood | Disable ▼ |
| Stateful Packet Inspection (SPI) | |
| SPI Firewall | Disable ▼ |

Remote Management

| Object | Description |
|-----------------------------|--|
| Remote management (via WAN) | Deny or allow remote management through web. |
| Remote Web management Port | The default remote management port is 80. You can change the remote management port for your needs. e.g. 8080. |

Ping from WAN Filter

| Object | Description |
|----------------------|---|
| Ping from WAN Filter | You may select enable or disable to determine whether to filter the ping package which comes from the external network. |

Block Port Scan

| Object | Description |
|-----------------|--|
| Block Port Scan | You may select enable or disable to determine whether to block the scanning which comes from the external network. |

Block SYN Flood

| Object | Description |
|-----------------|--|
| Block SYN Flood | You may select enable or disable to determine whether to block the SYN Flood attacks come from the external network. |

Stateful Packet Inspection (SPI)

| Object | Description |
|--------------|---|
| SPI Firewall | You may disable or enable the SPI firewall. |

5.4.5 Content Filtering

This page is used to configure the Blocked FQDN (Such as tw.yahoo.com) and filtered keyword. Here you can add / delete FQDN and filtered keyword.

Choose **Firewall > Content Filtering** and the following page appears. You can set content filter to restrict the improper content access.

Content Filter Settings

You can setup Content Filter to restrict the improper content access.

Webs Content Filter

Filters: Proxy Java ActiveX

Webs URL Filter Settings

Current Webs URL Filters:

| | |
|----|-----|
| No | URL |
|----|-----|

Add a URL filter:

URL:

Webs Content Filters

| Object | Description |
|----------------------|---|
| Webs Content Filters | If you want to block some applications as Proxy, Java and ActiveX of web pages please select the check box and click "Apply". |

Current Webs URL Filters

| Object | Description |
|--------------------------|---|
| Current Webs URL Filters | If you want to delete some filters in the table above, select the rules, and then click Delete . Otherwise, click Reset . |

Add a URL filter

| Object | Description |
|------------------|--|
| Add a URL filter | Enter the FQDN and click "Add" to apply this URL filter rule. Click Add to add a URL filter. Otherwise, click Reset to cancel the URL filter. |

5.5 Layer 2 functions

A single layer-2 network may be partitioned to create multiple distinct broadcast domains. Such a domain is referred to as a Virtual LAN or VLAN. Network administrators set up VLANs to provide the segmentation services traditionally provided by routers in LAN configuration. This page allows you to set the VLAN.

5.5.1 Port Status

Choose **Layer 2 Function > Port Status** and the following page appears. This page displays each port's Speed, Duplex mode, Flow Control status.

| Port Status | | | | | | |
|-------------------|------|----------|--------|--------------|----------------|-----|
| Show Port status. | | | | | | |
| Port Status | | | | | | |
| Port | Link | Speed | Duplex | Flow Control | Packet Counter | |
| | | | | | Good | Bad |
| 1 | Down | -- | -- | -- | 0 | 0 |
| 2 | Down | -- | -- | -- | 0 | 0 |
| 3 | Down | -- | -- | -- | 0 | 0 |
| 4 | Up | 100 Mbps | On | Off | 658 | 0 |

5.5.2 Port Setting

This page allows you to select a different Mode, Flow Control or Port Enable.

| Fast Ethernet Port Configuration | | | |
|---|--------------------|--------------|-------------|
| You may configure Fast Ethernet Port settings here. | | | |
| Fast Ethernet Port Configuration | | | |
| Port | Mode | Flow Control | Port Enable |
| 1 | Auto Negotiation ▼ | Disable ▼ | Enable ▼ |
| 2 | Auto Negotiation ▼ | Disable ▼ | Enable ▼ |
| 3 | Auto Negotiation ▼ | Disable ▼ | Enable ▼ |
| 4 | Auto Negotiation ▼ | Disable ▼ | Enable ▼ |

The page includes the following fields:

| Object | Description |
|--------------|---|
| Port | This is the LAN port number for this row. |
| Mode | <p>You can choose 5 modes.</p> <ul style="list-style-type: none"> ■ Auto Negotiation ■ 100 Full ■ 100 Half ■ 10 Full ■ 10 Half <p>Please select the check box and click “Apply”.</p> |
| Flow Control | You can choose Enable or Disable. |
| Port Enable | You can choose Enable or Disable. |

5.5.3 VLAN Setting

You can enable or disable the VLAN setting. There are four groups that can be set. The first one is NAT group and the others are bridged with WAN port.

VLAN Setting

The Ethernet ports which are checked into the NAT Group are able to access into the web UI of the wireless router and NAT is enabled.

The Ethernet ports which are checked into the Group 1,2, or 3 are bridged separately with WAN port and NAT is disabled.

Please be noted that all the packets of ingress and egress on the WAN port will be tagged with the VID.

| VLAN | Disable ▾ | | | | | |
|-----------------|----------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|-------------|
| VLAN Group name | | Ethernet port | | | | VID(2~4094) |
| NAME | Enable | LAN 1 | LAN 2 | LAN 3 | LAN 4 | |
| NAT Group | Default Enable | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | 0 |
| Group 1 | Disable ▾ | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 0 |
| Group 2 | Disable ▾ | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 0 |
| Group 3 | Disable ▾ | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | 0 |

VLAN Mode Setting

- **Mode:** You can enable or disable the VLAN here.

VLAN Member Configuration

| Object | Description |
|-------------|--|
| VLAN Group: | You can select enable or disable. |
| VID: | Set the VID here for each Virtual LAN. |
| LAN1~4: | It means the LAN port on the router. |
| PVID: | You can set the PVID for each port here. |

Click **Apply** to enable the configuration to take effect. Click **Cancel** to cancel the new configuration.

5.5.4 MAC Address Table

This page shows MAC Address Table.

| MAC Address Table | | |
|-------------------------|-------------------|------|
| Show MAC Address Table. | | |
| MAC Address Table | | |
| No. | Mac Address | Port |
| 3 | B8:70:F4:B5:E5:DA | 4 |
| Refresh | | |

Click **Refresh** button to renew the list above immediately.

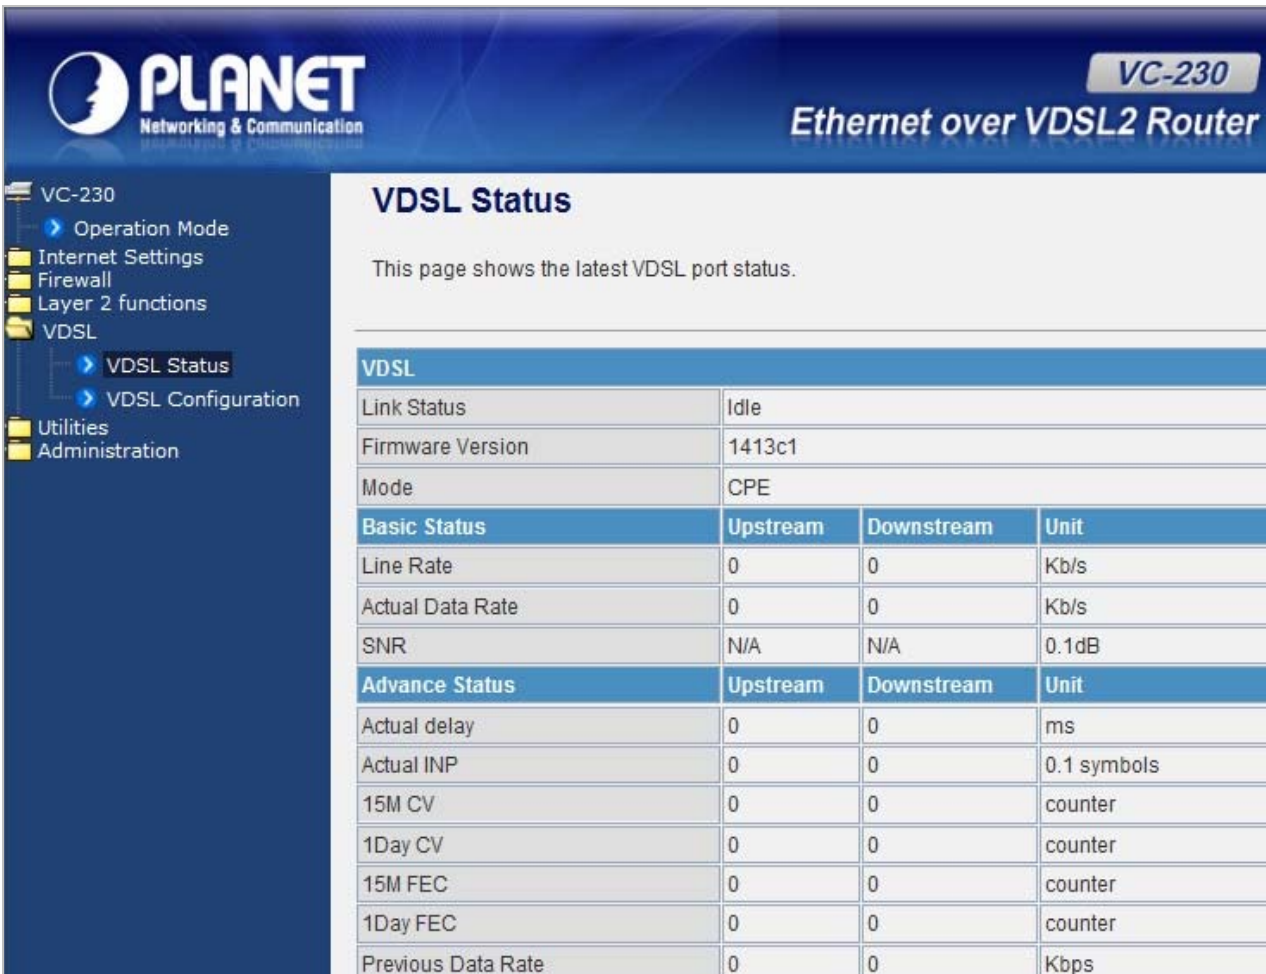

5.6 VDSL

VDSL2 (Very High-Bit-Rate Digital Subscriber Line 2), G.993.2 is the newest and most advanced standard of xDSL broadband wire line communications. Designed to support the wide deployment of Triple Play services such as voice, data, high definition television (HDTV) and interactive gaming, VDSL2 enable operators and carrier to gradually, flexibly, and cost efficiently upgrade exiting xDSL-infrastructure.

PLANET VDSL Router can provide very high performance access to Internet, both downstream and upstream up to 100Mbps. The VDSL Router complies with ITU-T G993.2 standard, and supports two selectable operating modes of VDSL2, CO and CPE mode. The CO or CPE mode can be adjusted by WEB UI and users can connect two VC-230 / VC-230N for Point-to-Point Application, data transmission between two networks over existing copper telephone lines.

5.6.1 VDSL Status

Users can check the VDSL Line status on this page; it includes Line status, Date Rate, SNR, Delay and Impulse Noise Protection.

PLANET Networking & Communication VC-230
Ethernet over VDSL2 Router

VDSL Status

This page shows the latest VDSL port status.

| VDSL | | | |
|--------------------|----------|------------|-------------|
| Link Status | Idle | | |
| Firmware Version | 1413c1 | | |
| Mode | CPE | | |
| Basic Status | Upstream | Downstream | Unit |
| Line Rate | 0 | 0 | Kb/s |
| Actual Data Rate | 0 | 0 | Kb/s |
| SNR | N/A | N/A | 0.1dB |
| Advance Status | Upstream | Downstream | Unit |
| Actual delay | 0 | 0 | ms |
| Actual INP | 0 | 0 | 0.1 symbols |
| 15M CV | 0 | 0 | counter |
| 1Day CV | 0 | 0 | counter |
| 15M FEC | 0 | 0 | counter |
| 1Day FEC | 0 | 0 | counter |
| Previous Data Rate | 0 | 0 | Kbps |

5.6.2 VDSL Configuration

The VDSL Router provides two VDSL operation modes for applications. Users can select the CO and CPE mode manually.

For CPE mode, the router works as a VDSL client device, the VDSL connection is based on the CO side; users don't need to configure any VDSL settings in this mode.

For CO mode, the router works as a VDSL CO device such as VDSL DSLAM or Switch, you can configure the VDSL basic parameters for your VDSL connection.

CPE Mode

The VDSL Router **default is CPE mode**, in this mode, all VDSL parameters will be blocked and users don't need to configure it. Just connect to CO device for VDSL connection.

PLANET Networking & Communication
VC-230 Ethernet over VDSL2 Router

VDSL Configuration

You may setup the VDSL operating mode in this page. CO mode make the Router as VDSL 2 active-end to train with its link partner. Parameters are also available for setting. And set the VDSL mode to CPE will make the Router as passive VDSL interface that training with VDSL active partner.

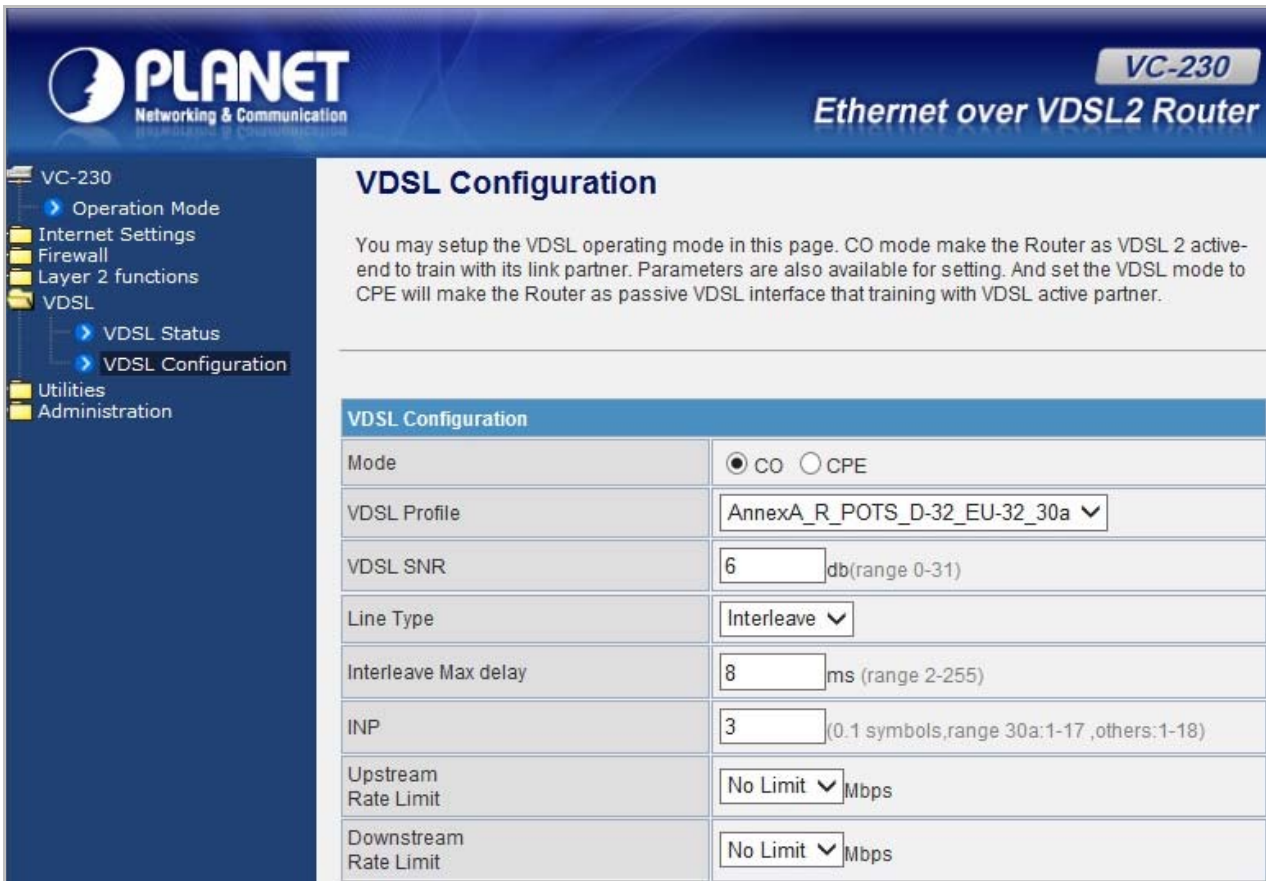

| VDSL Configuration | |
|-----------------------|---|
| Mode | <input type="radio"/> CO <input checked="" type="radio"/> CPE |
| VDSL Profile | AnnexA_R_POTS_D-32_EU-32_30a ▼ |
| VDSL SNR | 6 db(range 0-31) |
| Line Type | Interleave ▼ |
| Interleave Max delay | 8 ms (range 2-255) |
| INP | 3 (0.1 symbols,range 30a:1-17 ,others:1-18) |
| Upstream Rate Limit | No Limit ▼ Mbps |
| Downstream Rate Limit | No Limit ▼ Mbps |

CO Mode

If you want to configure the VDSL Router as a CO device for Peer-to-Peer connection, please select CO mode and you can select proper settings for your VDSL connection.

Default CO parameters:

- VDSL Profile: **AnnexA_R_POTS_D-32_EU-32_30a**
- VDSL SNR: **6 dB**
- Line Type: **Interleave**
- Interleave Max. Delay: **8 ms**
- INP : **3**
- Upstream / Downstream Rate Limit: **No Limit**

PLANET Networking & Communication VC-230
Ethernet over VDSL2 Router

VDSL Configuration

You may setup the VDSL operating mode in this page. CO mode make the Router as VDSL 2 active-end to train with its link partner. Parameters are also available for setting. And set the VDSL mode to CPE will make the Router as passive VDSL interface that training with VDSL active partner.

| VDSL Configuration | |
|-----------------------|--|
| Mode | <input checked="" type="radio"/> CO <input type="radio"/> CPE |
| VDSL Profile | AnnexA_R_POTS_D-32_EU-32_30a ▼ |
| VDSL SNR | 6 <input type="text"/> db(range 0-31) |
| Line Type | Interleave ▼ |
| Interleave Max delay | 8 <input type="text"/> ms (range 2-255) |
| INP | 3 <input type="text"/> (0.1 symbols,range 30a:1-17 ,others:1-18) |
| Upstream Rate Limit | No Limit ▼ Mbps |
| Downstream Rate Limit | No Limit ▼ Mbps |

The page includes the following fields:

| Object | Description |
|------------------------------------|---|
| <p>VDSL Profile</p> | <p>The VDSL2 router provides most common VDSL2 profiles for user; it supports the 30a, 17a, 12a, 12b, 8a, 8b, 8c and 8d. You can select the proper profile for your real environment. Different profiles provide different connection status of data rate and distance; please refer to Appendix A for more information.</p> <p>Click on the drop-down list and select the VDSL band plan to be used. The VDSL2 Managed Switch supports below profiles.</p> <ol style="list-style-type: none"> 1. AnnexA_R_POTS_D-64_EU-64_30a 2. AnnexA_R_POTS_D-32_EU-32_30a 3. AnnexA_R_POTS_D-64_EU-64_17a 4. AnnexA_R_POTS_D-32_EU-32_17a 5. AnnexA_R_POTS_D-32_EU-32_12a 6. AnnexA_R_POTS_D-32_EU-32_12b 7. AnnexA_R_POTS_D-32_EU-32_8a 8. AnnexA_R_POTS_D-32_EU-32_8b 9. AnnexA_R_POTS_D-32_EU-32_8c 10. AnnexA_R_POTS_D-32_EU-32_8d 11. AnnexB_997_997E17-M2x-A 12. AnnexB_997_997E30-M2x-NUS0 13. AnnexB_998_998E17-M2x-NUS0 14. AnnexB_998_998E30-M2x-NUS0 15. AnnexC_POTS_25-138_b 16. AnnexC_POTS_25-276_b 17. AnnexC_TCM-ISDN |
| <p>VDSL SNR</p> | <p>The line quality is determined by using the SNR (Signal to Noise Ratio) and applies to VDSL line connections only. SNR is the ratio of the amplitude of the actual signal to the amplitude of noise signals at a given point in time. The higher the SNR is, the better the line quality. Please manually adapt SNR margin according to line quality and distance to get better performance or replace the line with new one.</p> <p>Click on the drop-down list and select the SNR to be used. Configures SNR margin of Downstream or Upstream.</p> <p>SNR margin value: 6 dB to 24 dB</p> <p>Default value: 6 dB</p> |
| <p>Line Type (MaxDelay)</p> | <p>The VDSL line type can be configured by selecting maximum Interleave delay of Downstream or Upstream direction. Basically, there are three types</p> <ul style="list-style-type: none"> ■ No limit ■ Fast mode |

| | |
|-------------------------------------|---|
| | <p>■ Interleave</p> <p>The interleave process is use to correct data error before modulation digital signal into analog signal. Interleave prevents error by enhanced correction but may slow down transmit rate because packets are gathered.</p> <p>Interleaved mode provides impulse noises protection for any impulse noise with a duration less than 250 us. By configuring interleave maximum-delay, it can prevent transmission delay caused of waiting data gathered.</p> <p>To skip Interleave process, select “No delay” to operate with Fast mode.</p> <p>Fast mode guarantees a minimum end to end latency less than 1 ms.</p> <p>Click on the drop-down list and select the Line Type to be used. Configures interleave-delay with specifying Downstream or Upstream. The unit is msec.</p> <p>The range between 0ms to 63ms</p> <p>Default value: 8ms</p> |
| <p>INP 30a</p> | <p>Configure INP with specifying Upstream or Downstream to set minimum protection values of port provision. Click on the drop-down list and select the INP (Impulse Noise Protection) to be used.</p> <p>The range between 1 (or 0.5 for no 30a case) to 16 symbol or No Protection</p> <p>Default value: 2 symbol</p> |
| <p>Upstream Rate Limit</p> | <p>Configure the transmit rate of Maximum Upstream. The value of outbound traffic limitation in Mbps, from the VDSL2 CO to the CPE.</p> <p>Default is No Limit.</p> <p>The range between 1Mbps to 100Mbps.</p> |
| <p>Downstream Rate Limit</p> | <p>Configure the transmit rate of Maximum Downstream. The value of inbound traffic limitation in Mbps, from the VDSL2 CPE to the CO.</p> <p>Default is No Limit.</p> <p>The range between 1Mbps to 100Mbps.</p> |

Note

1. The default profile of VDSL port is “**30a**”
2. If the SNR margin is configured too big, the transmit rate will slow down, whereas communications is stable.
3. If the “MaxDelay” is configured to “**No Delay**” (Fast mode), error correction will not be done well, whereas transmit data rate becomes faster.

Option Band:

AnnexA: use 6 to 32 tone in annex A environment in the direction of upstream.

AnnexB: use 32 to 64 tone in annex B environment in the direction of upstream.

5.7 Utilities

The VC-230 / VC-230N provides four functions for users to use.

5.7.1 Ping Test Setup

This page is used to configure the parameters for Ping Test which pings to IP address or Domain Name.

The screenshot shows the web interface of a Planet VC-230 router. The top header features the Planet logo and the text "Ethernet over VDSL2 Router". A navigation menu on the left lists various settings categories, with "Utilities" expanded to show "Ping_test", "IPv6 Ping", "Trace Route", and "Watchdog Ping". The main content area is titled "Ping Test Setup" and contains a descriptive paragraph: "This page is used to configure the parameters for Ping Test which pings to IP address or Domain Name." Below this is a "Ping Tool" section with a text input field for "IP Address:", a "Test" button, and a "Clear Message" button. A large empty text area is provided for displaying test results, and a "Refresh" button is located at the bottom of the page.

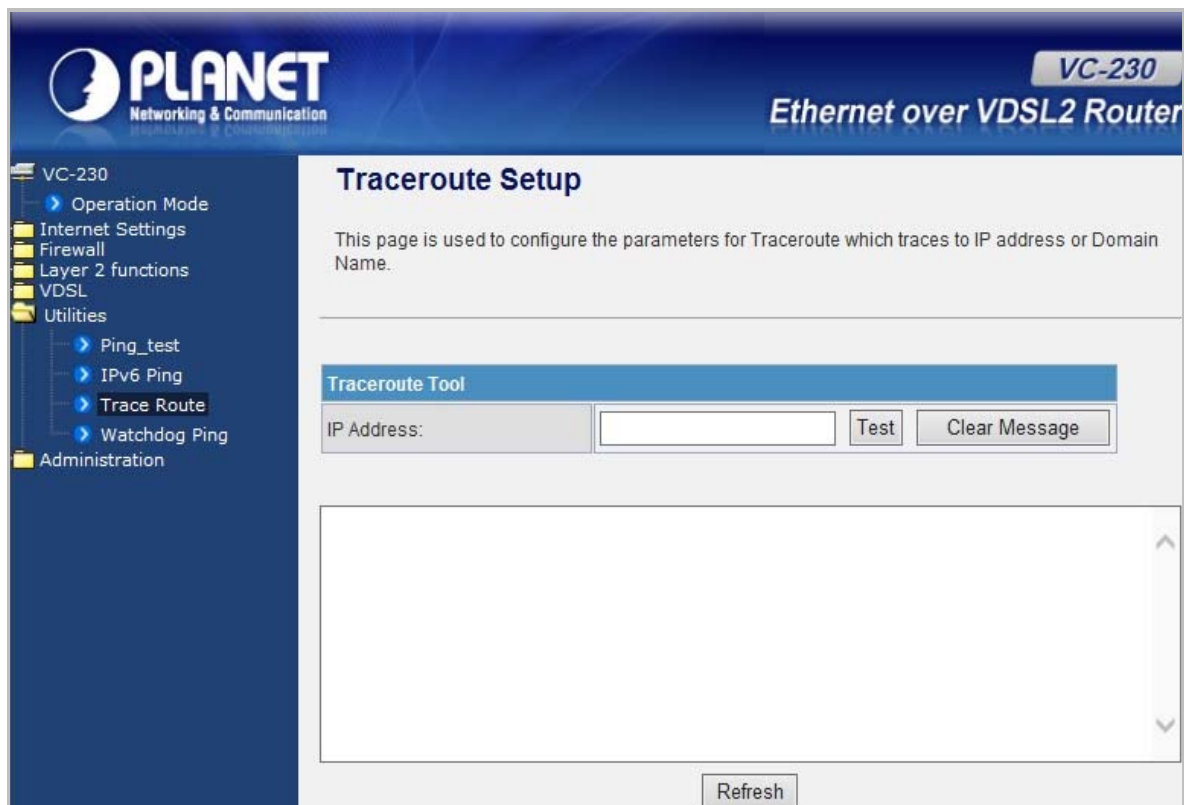

5.7.2 IPv6 Ping Test

This page is used to configure the parameters for IPv6 Ping Test which pings to IPv6 address or Domain Name.

5.7.3 Trace Route

This page is used to configure the Traceroute which traces to IP address or Domain Name.

5.7.4 Watch Dog Ping

On this page you can enable Ping Watchdog. And configure the parameters for Ping Watchdog which pings to IP address every time interval. System will reboot when failing to ping the IP address 3 times.

Ping Watchdog Setup

This page is used to configure the parameters for Ping Watchdog which pings to IP address every time interval. System will reboot when failing to ping the IP address 3 times.

Enable Ping Watchdog

| | |
|----------------|---|
| IP Address: | <input type="text" value="192.168.1.1"/> |
| Ping Count: | <input type="text" value="3"/> times (1~100) |
| Time Interval: | <input type="text" value="5"/> minutes (1~15) |

The page includes the following fields:

| Object | Description |
|---------------|---------------------------|
| Ping Count | Set times from 1 to 100. |
| Time Interval | Set minutes from 1 to 15. |

5.8 Administration

You can configure admin management in this part. It includes Management, Update Firmware, Setting Management, Reboot, Status, Statistics and System Log.

5.8.1 Management

Choose **Administration > Management**, and the following page appears. You may configure administrator account and password on the page.

System Management

You may configure administrator account and password.

Administrator Settings

| | |
|----------|--|
| Account | <input style="width: 90%;" type="text" value="admin"/> |
| Password | <input style="width: 90%;" type="password" value="•••••"/> |

Administrator Settings

| Object | Description |
|-----------------|--|
| Account | Enter the user name of the administrator in the field. |
| Password | Enter the user name of the administrator in the field. |

5.8.2 Uploading Firmware

Choose **Administration > Upload Firmware** and the following page appears. On this page, you may upgrade the correct new version firmware to obtain new functionality. It takes about 2 minutes to upload and upgrade the flash.

If the firmware is uploaded in an improper way, the system would core dump.

Upgrade Firmware

Upgrade firmware for feature enhancement. **The upgrade process will takes about 2 minutes for file upload and flash updates.& Please do not power off or remove the connection during the process. Caution! A corrupted image will hang up the system.**

Update Firmware

Loading Factory Defaults

| Object | Description |
|--------------|--|
| Load Default | Click Load Default to make Router return to the default settings. |

5.8.4 SNMP Configuration

Simple Network Management Protocol (SNMP) is a popular protocol for network management. It is widely used in local area networks (LAN) for collecting information, and managing and monitoring, network devices, such as servers, printers, hubs, switches, and routers from a management host.

Managed devices that support SNMP including software are referred to as an SNMP agent, which usually interacts with third-party SNMP management software to enable the sharing of network status information between monitored devices and applications and the SNMP management system.

A defined collection of variables (managed objects) are maintained by the SNMP agent and used to manage the device. These objects are defined in a **Management Information Base (MIB)**, which provides a standard presentation of the information controlled by the on-board SNMP agent. SNMP defines both the format of the MIB specifications and the protocol used to access this information over the network.

Choose **Administration > SNMP configuration** and the following page appears. You may enable SNMP Configuration and Trap Configuration settings.

| SNMP Configuration | |
|----------------------|-------------------|
| SNMP Configuration | |
| Mode | Disable ▾ |
| System Description | VDSLRouter |
| System Contact | www.planet.com.tw |
| System Name | VC-230 |
| System Location | PLANET |
| Allowed IP to Access | |
| Read Community | public |
| Write Community | private |

The page includes the following fields:

| Object | Description |
|-------------------------|---|
| Mode | Indicates the SNMP mode operation. Possible modes are: <ul style="list-style-type: none"> • Enabled: Enable SNMP mode operation. • Disabled: Disable SNMP mode operation. |
| System Contact: | Set the name to access the router. Usually set the administrator's name. |
| System Name: | Set the router's name, such as " VC-230 ". |
| System Location: | Set the router's network location. |
| Read Community: | Indicates the community read access string to permit reading this router's SNMP information. The default is Public . |
| Write Community: | Indicates the community write access string to permit reading and re-writing this router's SNMP information. The default is Private . |

| Trap Configuration | |
|---|--------------|
| Mode | Disable ▾ |
| Trap Community | public |
| Trap Destination | 192.168.1.10 |
| <input type="button" value="Apply"/> <input type="button" value="Reset"/> | |

Trap Configuration

| Object | Description |
|---------------------------|---|
| Mode : | Indicates the SNMP trap mode operation. Possible modes are: Enabled: Enable SNMP trap mode operation. Disabled: Disable SNMP trap mode operation. |
| Trap Community: | Enter the community string for the trap station. |
| Trap Destination : | Enter the IP address of the trap manager. |

Click **Apply** to enable the configuration to take effect. Click **Reset** button to reset the whole configuration to default.

5.8.5 Reboot

The **Reboot** screen allows you to restart your router with its current settings. Click the “Reboot” button and the device will restart.

| Reboot | |
|--------------------------|---------------------------------------|
| You might reboot device. | |
| Reboot Device | |
| Reboot Button | <input type="button" value="Reboot"/> |

5.8.6 Status

Choose **Administration > Status** and the following page appears. It displays the information about Router status, including system information, Internet configurations, and local network.

| VC-230 Status | |
|--------------------------------|------------------------------|
| System Info | |
| Firmware Version | v1.1b130807 |

5.8.10 NTP

Choose **Administration > NTP** and the following page appears. You may configure NTP settings on this page.

NTP settings

You may configure NTP settings here.

NTP Settings

| | | |
|---------------------|---|----------------|
| Current Time | Sat Jan 1 08:13:22 GMT 2000 | Sync with host |
| Time Zone: | (GMT+08:00) Taipei ▼ | |
| NTP Server | pool.ntp.org ▼ pool.ntp.org | |
| NTP synchronization | 1 (1~300 minutes) | |

NTP Settings

| Object | Description |
|----------------------------|--|
| Current Time | Display the current date and time. Click Sync with host , the current time is synchronized by your PC which is connected to Router. |
| Time Zone | Select the proper time zone in the drop-down list. |
| NTP Server | Enter the IP address or domain name of NTP server. |
| NTP synchronization | Enter the time interval for synchronization. From 1 to 300 minutes. |

5.8.11 DDNS

The Wireless Router offers the **DDNS** (Dynamic Domain Name System) feature, which allows the hosting of a website, FTP server, or e-mail server with a fixed domain name (named by yourself) and a dynamic IP address, and then your friends can connect to your server by entering your domain name no matter what your IP address is. Before using this feature, you need to sign up for DDNS service providers such as [PLANET DDNS](#) or [dynamic DNS](#). The Dynamic DNS client service provider will give you a password or key.

Choose **Administration > DDNS** and the following page appears. You can choose Disable, Enable Easy DDNS and Dynamic DDNS settings on this page.

| DDNS settings | |
|--|-------------------------|
| You may configure DDNS Settings here. The available option can be PLANET Easy DDNS or standard Dynamic DNS services. | |
| DDNS option | |
| Enable Easy DDNS | ▼ |
| Easy Domain Name | pl123407.planetddns.com |
| DDNS Settings | |
| Dynamic DNS Provider | None ▼ |
| Account | <input type="text"/> |
| Password | <input type="text"/> |
| DDNS | <input type="text"/> |
| <input type="button" value="Apply"/> <input type="button" value="Cancel"/> | |

Easy DDNS

Planet Easy DDNS is a way help to get your Domain Name with just one click. Once you enabled the Easy DDNS, your Planet Network Device will use the format PLxxxxxx where xxxxxx is the last 6 characters of your MAC address that can be found on the web page or bottom label of the device. (For example, 00-30-4F-12-34-07, it will be converted into PL123407.planetddns.com)

DDNS settings

You may configure DDNS Settings here. The available option can be PLANET Easy DDNS or standard Dynamic DNS services.

DDNS Settings

| Object | Description |
|-----------------------------|--|
| Dynamic DNS Provider | Select the proper dynamic DNS provider in the drop-down list. After selecting a dynamic DNS provider, you are allowed to set the following parameters. |
| Account | Enter the username of DDNS provider in the field. |
| Password | Enter the password of DDNS provider in the field. |
| DDNS | Enter the domain name of your device. |

Planet DDNS

First of all, please go to <http://www.planetddns.com> to register a Planet DDNS account, and refer to the FAQ (<http://www.planetddns.com/index.php/faq>) for how to register a free account.

To select **Dynamic DNS Provider > PlanetDDNS.com**

| DDNS option | |
|--|---------------------------|
| Enable Dynamic DDNS | ▼ |
| Easy Domain Name | pl123407.planetddns.com |
| DDNS Settings | |
| Dynamic DNS Provider | PlanetDDNS.com ▼ |
| Account | username |
| Password | ●●●●●● |
| DDNS | username@planetddns.com ✕ |
| <input type="button" value="Apply"/> <input type="button" value="Cancel"/> | |

- Step 1.** Type the User Name for your DDNS account.
- Step 2.** Type the Password for your DDNS account.
- Step 3.** Type the Domain Name you received from dynamic DNS service provider.

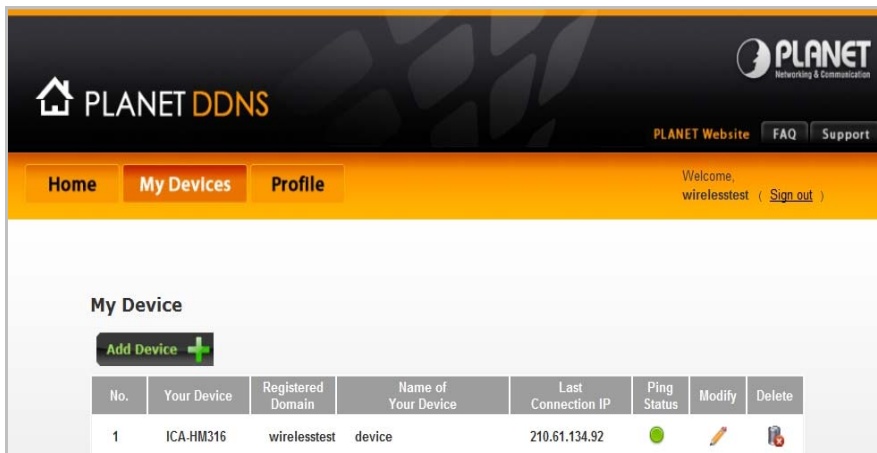

Go to **Firewall >System Security> Remote management** and choose **Allow** to allow remote access from WAN port.

| Remote management | |
|-----------------------------|---------|
| Remote management (via WAN) | Allow ▼ |
| Remote Web Management Port | 80 |

Apply the settings and ensure you have connected the WAN port to the Internet. In a remote device, enter the Domain Name to the internet browser's address bar.

You can go to [My Devices](#) page of Planet DDNS website to check if the "Last Connection IP" is displayed. This indicates your DDNS service is working properly.

5.8.12 Max Session

Choose **Administration > Max Session** and the following page appears. You may configure Max Session on this page.

MAX Session

Your may configure MAX Session here.

MAX Session

MAX Session Setting (4096~15000):

5.8.13 Session List

Choose **Administration > Session List** and the following page appears. You may monitor Session List on this page.

Session List

You could monitor Session List here.

Session List

| Index | Protocol | Source Address | Destination Address | State |
|-------|----------|---------------------|-----------------------|-----------|
| 1 | udp | 192.168.1.100:17500 | 255.255.255.255:17500 | UNREPLIED |
| 2 | udp | 192.168.1.100:137 | 192.168.1.255:137 | UNREPLIED |
| 3 | udp | 192.168.1.100:17500 | 192.168.1.255:17500 | UNREPLIED |

Appendix A: Performance of VDSL Router Profiles

The table below is a performance table for profile and line distance; this data is just for reference. The actual data rate will vary on the quality of the telephone line and environmental factors.

For better performance, we suggest you use the AWG-26 or above cable for your connection, and the best line distance is about 1km.

(Data Rate: Mbps)

| Profile \ Distance | | 200m | 400m | 800m | 1000m |
|--------------------|------|------|------|------|-------|
| AnnexA_EU-32_30a | Up | 100 | 50 | 5 | |
| | Down | 100 | 100 | 60 | |
| AnnexA_EU-32_17a | Up | 55 | 45 | 20 | 7 |
| | Down | 100 | 100 | 55 | 50 |
| AnnexA_EU-32_12a | Up | 55 | 45 | 20 | 7 |
| | Down | 80 | 70 | 60 | 50 |
| AnnexA_EU-32_12b | Up | 55 | 45 | 20 | 7 |
| | Down | 80 | 70 | 60 | 50 |
| AnnexA_EU-32_8a | Up | 15 | 13 | 9 | 6 |
| | Down | 80 | 72 | 60 | 50 |
| AnnexA_EU-32_8b | Up | 15 | 13 | 9 | 6 |
| | Down | 80 | 72 | 60 | 50 |
| AnnexA_EU-32_8c | Up | 15 | 14 | 10 | 7.5 |
| | Down | 80 | 72 | 60 | 50 |
| AnnexA_EU-32_8d | Up | 15 | 13 | 9 | 6 |
| | Down | 80 | 72 | 60 | 50 |

The real data rate and distance are based on your real environment. This is just for reference.

Appendix B: Glossary

Address mask

A bit mask select bits from an Internet address for subnet addressing. The mask is 32 bits long and selects the network portion of the Internet address and one or more bits of the local portion. Sometimes it called subnet mask.

VDSL

VDSL2 (Very High-Bit-Rate Digital Subscriber Line 2), G.993.2 is the newest and most advanced standard of xDSL broadband wire line communications.

ADSL

Asymmetric digital subscriber line

AAL5

ATM Adaptation Layer - This layer maps higher layer user data into ATM cells, making the data suitable for transport through the ATM network.

ATM

Asynchronous Transfer Mode - A cell-based data transfer technique in which channel demand determines packet allocation. ATM offers fast packet technology, real time, and demand led switching for efficient use of network resources.

AWG

American Wire Gauge - The measurement of thickness of a wire

Bridge

A device connects two or more physical networks and forward packets between them. Bridges can usually be made to filter packets, that is, to forward only certain traffic. Related devices are repeaters which simply forward electrical signals from one cable to the other and full-fledged routers which make routing decisions based on several criteria.

Broadband

Characteristic of any network multiplexes independent network carriers onto a single cable. Broadband technology allows several networks to coexist on one single cable; traffic from one network does not interfere with traffic from another. Broadcast a packet delivery system where a copy of a given packet is given to all hosts attached to the network. Example: Ethernet.

CO

Central Office. Refers to equipment located at a Telco or service provider's office.

CPE

Customer Premises Equipment located in a user's premises

DHCP (Dynamic Host Configuration Protocol)

DHCP is software that automatically assigns IP addresses to client stations logging onto a TCP/IP network. DHCP eliminates having to manually assign permanent IP addresses to every device on your network. DHCP software typically runs in servers and is also found in network devices such as Routers.

DMT

Discrete Multi-Tone frequency signal modulation

Downstream rate

The line rate for return messages or data transfers from the network machine to the user's premises machine.

DSLAM

Digital Subscriber Line Access Multiplex

Dynamic IP Addresses

A dynamic IP address is an IP address that is automatically assigned to a client station (computer, printer, etc.) in a TCP/IP network. Dynamic IP addresses are typically assigned by a DHCP server, which can be a computer on the network or another piece of hardware, such as the Router. A dynamic IP address may change every time your computer connects to the network.

Encapsulation

The technique layer protocols in which a layer adds header information to the protocol data unit (PDU) from the layer above. As an example, in Internet terminology, a packet would contain a header from the physical layer, followed by a header from the network layer (IP), followed by a header from the transport layer (TCP), and followed by the application protocol data.

Ethernet

One of the most common local area network (LAN) wiring schemes, Ethernet has a transmission rate of 10 Mbps.

FTP

File Transfer Protocol. The Internet protocol (and program) transfer files between hosts.

Hop count

A measure of distance between two points on the Internet. It is equivalent to the number of gateways that separate the source and destination.

HTML

Hypertext Markup Language - The page-coding language for the World Wide Web.

HTML browser

A browser used to traverse the Internet, such as Netscape or Microsoft Internet Explorer.

http

Hypertext Transfer Protocol - The protocol carry world-wide-web (www) traffic between a www browser computer and the www server being accessed.

ICMP

Internet Control Message Protocol - The protocol handle errors and control messages at the IP layer. ICMP is actually part of the IP protocol.

Internet address

An IP address is assigned in blocks of numbers to user organizations accessing the Internet. These addresses are established by the United States Department of Defense's Network Information Center. Duplicate addresses can cause major problems on the network, but the NIC trusts organizations to use individual addresses responsibly. Each address is a 32-bit address in the form of x.x.x.x where x is an eight-bit number from 0 to 255. There are three classes: A, B and C, depending on how many computers on the site are likely to be connected.

Internet Protocol (IP)

The network layer protocol for the Internet protocol suite

IP address

The 32-bit address assigned to hosts that want to participate in a TCP/IP Internet.

ISP

Internet service provider - A company allows home and corporate users to connect to the Internet.

MAC

Media Access Control Layer - A sub-layer of the Data Link Layer (Layer 2) of the ISO OSI Model responsible for media control.

MIB

Management Information Base - A collection of objects can be accessed via a network management protocol, such as SNMP and CMIP (Common Management Information Protocol).

NAT

Network Address Translation - A proposal for IP address reuse, where the local IP address is mapped to a globally unique address.

NVT

Network Virtual Terminal

PAP

Password Authentication Protocol

PORT

The abstraction used in Internet transport protocols to distinguish among multiple simultaneous connections to a single destination host.

POTS

Plain Old Telephone Service - This is the term describe basic telephone service.

PPP

Point-to-Point-Protocol - The successor to SLIP, PPP provides router-to-router and host-to-network connections over both synchronous and asynchronous circuits.

PPPoE

PPP over Ethernet is a protocol for connecting remote hosts to the Internet over an always-on connection by simulating a dial-up connection.

Remote server

A network computer allows a user to log on to the network from a distant location.

RFC

Request for Comments - Refers to documents published by the Internet Engineering Task Force (IETF) proposing standard protocols and procedures for the Internet. RFC can be found at www.ietf.org.

Route

The path that network traffic takes from its source to its destination. The route a datagram may follow can include many gateways and many physical networks.

In the Internet, each datagram is routed separately.

Router

A system is responsible for making decisions about which of several paths network (or Internet) traffic will follow. To do this, it uses a routing protocol to gain information about the network and algorithms to choose the best route based on several criteria known as "routing metrics".

Routing Table

Information stored within a router that contains network path and status information. It is used to select the most appropriate route to forward information along.

Routing Information Protocol

Routers periodically exchange information with one another so that they can determine minimum distance paths between sources and destinations.

SNMP

Simple Network Management Protocol - The network management protocol of choice for TCP/IP-based Internet.

SOCKET

- (1) The Berkeley UNIX mechanism for creating a virtual connection between processes.
- (2) IBM term for software interfaces that allow two UNIX application programs to talk via TCP/IP protocols.

Spanning-Tree Bridge Protocol (STP)

Spanning-Tree Bridge Protocol (STP) - Part of an IEEE standard. A mechanism for detecting and preventing loops from occurring in a multi-bridged environment.

When three or more LAN's segments are connected via bridges, a loop can occur. Because of a bridge forwards all packets that are not recognized as being local, some packets can circulate for long periods of time, eventually degrading system performance. This algorithm ensures only one path connects any pair of stations, selecting one bridge as the 'root' bridge, with the highest priority one as identifier, from which all paths should radiate.

Spoofing

A method of fooling network end stations into believing that keep alive signals have come from and returned to the host. Polls are received and returned locally at either end

Static IP Address

A static IP address is an IP address permanently assigned to computer in a TCP/IP network. Static IP addresses are usually assigned to networked devices that are consistently accessed by multiple users, such as Server PCs, or printers. If you are using your Router to share your cable or DSL Internet connection, contact your ISP to see if they have assigned your home a static IP address. You will need that address during your Router's configuration.

Subnet

For routing purposes, IP networks can be divided into logical subnets by using a subnet mask. Values below those of the mask are valid addresses on the subnet.

TCP

Transmission Control Protocol - The major transport protocol in the Internet suite of protocols provides reliable, connection-oriented full-duplex streams.

TFTP

Trivial File Transfer Protocol. A simple file transfer protocol (a simplified version of FTP) that is often boot diskless workstations and other network devices such as routers over a network (typically a LAN).

Telnet

The virtual terminal protocol in the Internet suite of protocols - Allows users of one host to log into a remote host and act as normal terminal users of that host.

Transparent bridging

The intelligence necessary to make relaying decisions exists in the bridge itself and is thus transparent to the communicating workstations. It involves frame forwarding, learning workstation addresses, and ensuring no topology loops exist (in conjunction with the Spanning-Tree algorithm).

UDP

User Datagram Protocol - A connectionless transport protocol that runs on top of TCP/IP's IP. UDP, like TCP, uses IP for delivery; however, unlike TCP, UDP provides for exchange of datagram without acknowledgments or guaranteed delivery. Best suited for small, independent requests, such as requesting a MIB value from an SNMP agent, in which first setting up a connection would take more time than sending the data.

UNI signaling

User Network Interface signaling for ATM communications.

Virtual Connection (VC)

A link that seems and behaves like a dedicated point-to-point line or a system that delivers packets in sequence, as happens on an actual point-to-point network. In reality, the data is delivered across a network via the most appropriate route. The sending and receiving devices do not have to be aware of the options and the route is chosen only when a message is sent. There is no pre-arrangement, so each virtual connection exists only for the duration of that one transmission.

WAN

Wide area network - A data communications network that spans any distance and is usually provided by a public carrier (such as a telephone company or service provider).

EC Declaration of Conformity

For the following equipment:

*Type of Product: 802.11n wireless VDSL2 Router (4*RJ45, 1*VDSL2, 1*Phone -30a)

*Model Number: VC-230N

* Produced by:

Manufacturer's Name : **Planet Technology Corp.**

Manufacturer's Address: 10F., No.96, Minquan Rd., Xindian Dist.
New Taipei City 231, Taiwan (R.O.C.).

is here with confirmed to comply with the requirements set out in the Council Directive on the Approximation of the Laws of the Member States relating to 1999/5/EC R&TTE. For the evaluation regarding the R&TTE the following standards were applied:

| | |
|----------------------|----------------------------------|
| EN 55022 | (2007+A2:2010) |
| EN 300 328 V1.7.1 | (2006-10) |
| EN 301 489-17 V2.1.1 | (2009-05) |
| EN 301 489-1 V1.9.2 | (2011-09) |
| EN 60950-1 | (2006+A11:2009+A1:2010+A12:2011) |

Responsible for marking this declaration if the:

Manufacturer Authorized representative established within the EU

Authorized representative established within the EU (if applicable):
