# DPC-D211
Firmware updating

1. Tools and Connection

   USB-485 Converter is needed and connection is as below, Also remember to power the door station.

2. Firmware Updating

    2.1 Install the driver for USB-485 converter on the computer (refer to the manual)
   Run the software IAP on the computer

    Note: Language: can be set to Chinese or English, it was English by default.
   Com Port: need to be set to the right port
          Baud: 38400,take the default value
   File Name: The software which is to be flashed into the DPC-D211
   2.2 Set the right com port for the USB-485 Converter, here it is com4

2.3 Select the software for the DPC-D211，click open to confirm

2.4 Click on update button to start the updating

When the updating is finished, click OK on the pop-up dialog.

Update successed!

OK

Note: When updating is in process, make sure power supply is stable.
      Any power down may cause damage to the CPU of the unit.
