

TFTP upgrade instructor

PROPERTY RIGHTS RESERVED

1、 Hardware Environment & Connections

1) For RS232 operation, the devices are as follows:

PC, RS232 Cable, DVR, network cable

If there is only laptop computer, USB to RS232 cable is required.

2) Connection Mode is as follows:

PC --- RS232 cable --- DVR

PC--- through network --- DVR

DVR to laptop computer

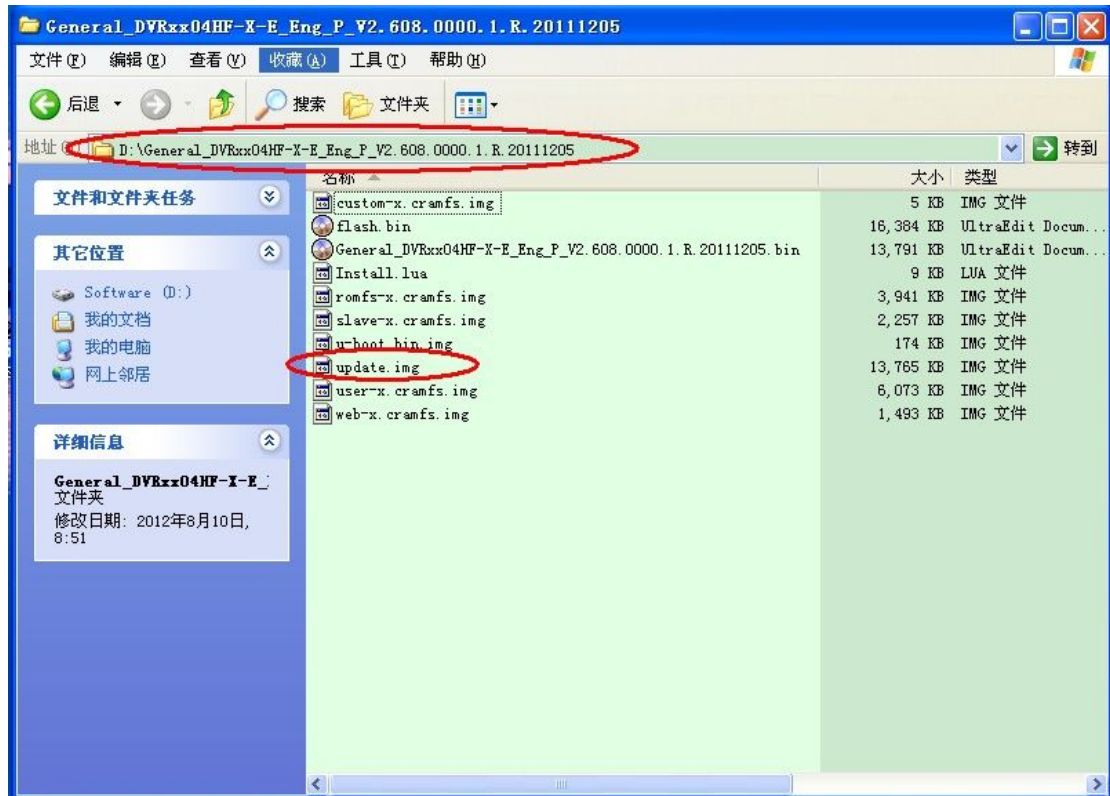

DVR to pc

2、 TFTP Upgrade

1) Unzip the upgrade software to you PC

make sure there have this file

[update.img](#)

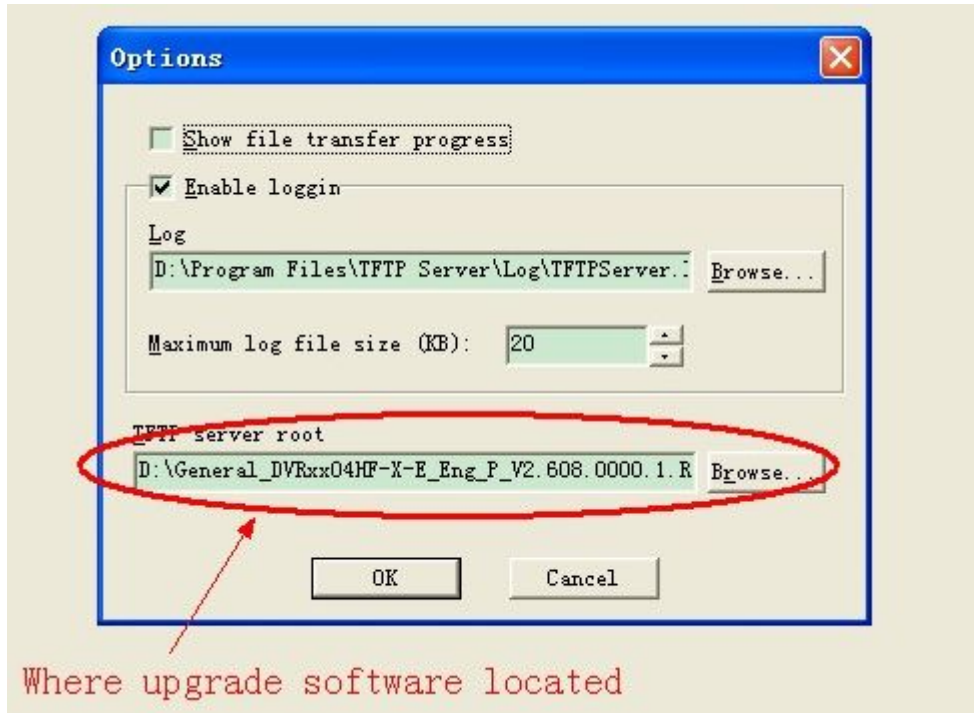

2) Run TFTP server

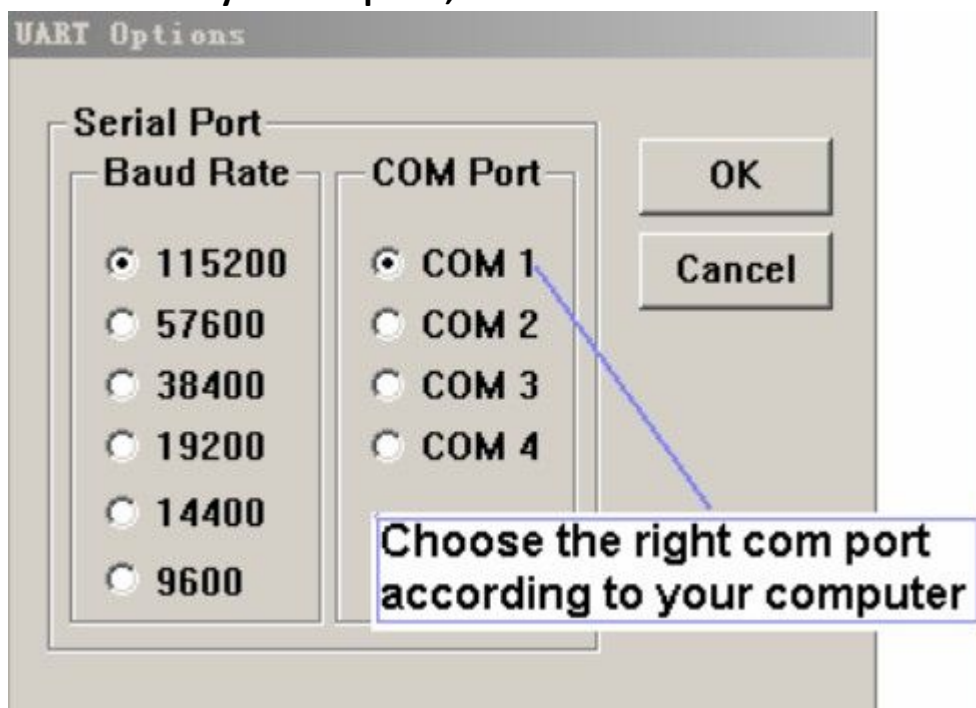

A、Run TFTP server: [TFTPServer_En.exe](#)

B、Set the upgrade route in the TFTP server, please see the picture below

3) Run NOCM in your computer, the com set is as follows:

4) See RS232 parameter

A. Restart the DVR, press "*" key of your PC keyboard 3 times quickly (upper right on number pad) when the words [Hit any key to stop autoboot](#) are on screen.

B、 Now you can enter TFTP menu, you can enter the commands now.

The screenshot shows a serial terminal window titled "NCOM v1.02 [COM1, 115200bps]". The terminal output includes the following text:

```
sendtofrontboard ch:3

Board: STx7108-HDK [32-bit mode]

U-Boot 1.3.1 (sun:293, Aug 24 2011 - 14:50:06) - stm24_0053

DRAM: 128 MiB
SPI: info: found S25FL128P (16MiB) device (page=256,erase=65536)
In: serial
Out: serial
Err: serial
Hit any key to stop autoboot: 0
HDK7108> **
Unknown command '**' - try 'help'
HDK7108>
```

Red annotations are present in the image:

- A red circle around "Hit any key to stop autoboot: 0" with a red arrow pointing to it from the right, accompanied by the text "Hit when countdown from 3 to 0".
- A red circle around "HDK7108>" with a red arrow pointing to it from the right, accompanied by the text "It will stop when succeed".

C、 Type “[printenv](#)” to show some information of the DVR, you will find the [appauto](#) and [dh_keyboard](#) are all 1, for TFTP upgrade, you should set them to 0.

```
DK7108> printenv
bootargs=mem=128M, console=ttyAS0,115200 rootfstype=cramfs
bigphysarea=1512
bootcmd=fsload; bootm
bootdelay=3
load_modules=1
logserver=127.0.0.1
da=tftp 0x80000000 u-boot.bin.img; flwrite

ipaddr=10.15.2.236
netmask=255.255.0.0
gatewayip=10.6.0.1
restore=0
appauto=1
dh_keyboard=1
stdin=serial
stdout=serial
stderr=serial
```

D、 Set these two parameters to 0 for TFTP ungrade.

Type “[set appauto 0](#)” to set the appauto to 0.

Type “[set dh_keyboard 0](#)” to set the dh_keyboard 0.

Type “[save](#)”.

```

HDK7108> set appauto 0
HDK7108> set dh_keyboard 0
HDK7108> save
Saving Environment to SPI Serial Flash...
HDK7108> printenv
bootargs=mem=128M, console=ttyAS0,115200 rootfstype=cramfs r
bigphysarea=1512
bootcmd=fsload; bootm
bootdelay=3
load_modules=1
logserver=127.0.0.1

ds=tftp 0x80000000 slave-x.cramfs.img; flwrite
dc=tftp 0x80000000 custom-x.cramfs.img; flwrite
up=tftp 0x80000000 update.img; flwrite
tk=tftp 0x80000000 uImage; bootm
baudrate=115200
ethaddr=20:11:04:07:13:01
eth1addr=20:11:08:04:17:01
ID=00000000000000000000
HWID=0000000000000000
serverip=10.15.2.235
ipaddr=10.15.2.236
netmask=255.255.0.0
gatewayip=10.6.0.1
restore=0
stdin=serial
stdout=serial
stderr=serial
appauto=0
dh_keyboard=0

```

E、Restart the DVR, then hit “*” 3 times again and stop the printing.

5) TFTP upgrade

For DVR with New version software

A、(Make sure the network is OK between your PC and DVR)

Type “[sip ip address of the PC](#)” to set the TFTP server ip”

Type “[lip ip address of the DVR](#)” to set the DVR ip”

Type “[save](#)” to save

B、Type “[run up](#)” to begin upgrade

```

```

E、The DVR will boot itself, and that's all

6) Upgrade Failure

- 1、To check if the RS232 serial port and serial cable is OK
- 2、To check if the network connection is OK
- 3、To check if the mac address of the DVR is right

- 4、 To check if the upgrade software is in the right folder and with right name
- 5、 To check if the NCOM and TFTP software is running
- 6、 Upgrade by TFTP upgrade again
- 7、 After several times attempt, if there is still have problems, please contact with our technical engineers.
